Principles of Numerical Taxonomy [by] Robert R. Sokal [and] Peter H.A. Sneath Robert R. Sokal,Peter Henry Andrews Sneath,1963

Biological Systematics Alessandro Minelli,2012-12-06 To some potential readers of this book the description of Biological Systematics as an art may seem outdated and frankly wrong For most people art is subjective and unconstrained by universal laws While one picture play or poem may be internally consistent comparison between different art products is meaningless except by way of the individual artists On the other hand modern Biological Systematics particularly phenetics and cladistics is offered as objective and ultimately governed by universal laws This implies that classifications of different groups of organisms being the products of systematics should be comparable irrespective of authorship Throughout this book Minelli justifies his title by developing the theme that biological classifications are in fact very unequal in their expressions of the pattern and processes of the natural world Specialists are imbibed with their own groups and tend to establish a consensus of what constitutes a species or a genus or whether it should be desirable to recognize sub species cultivars etc Ornithologists freely recognize subspecies and rarely do bird genera contain more than 10 species On the other hand some coleopterists and botanists work with genera with over 1500 species This asymmetry may reflect a biological reality it may express a working practicality or simply an historical artefact older erected genera often contain more species Rarely are these phenomena questioned *The Godelian Puzzle Book* Raymond M. Smullyan,2013-09-19 These recreational logic puzzles provide entertaining variations on Godel's incompleteness theorems offering ingenious challenges related to infinity truth and provability undecidability and other concepts Written by a distinguished mathematician and creator of numerous popular puzzle books this volume requires no background in formal logic and will delight readers of all ages
