Spatial Intelligence Daniel Ness, Stephen J. Farenga, Salvatore G. Garofalo, 2017-05-12 Spatial Intelligence examines public and professional conceptions of the relationships between thinking about spatial attributes and active engagement in spatially related constructions and designs Even though children s and adolescents spatial propensities in constructive activities parallel the skills needed by professionals in both established and emerging fields spatial education is often missing from K 12 curricula and is easily impeded by teachers parents or other individuals who do not provide contexts in formalized settings such as schools to nurture its potential This book bridges the gap by linking the natural spatial inclinations interests and proclivities of individuals from a variety of cultures with professional training and expertise in engineering architecture science and mathematics Educators will be better able to achieve the skills and awareness necessary to provide children and young adults with the vital opportunities inherent in spatial education

Human Movement and Motor Control in the Natural Environment Peter A Federolf, Maurice Mohr, Thorsten Stein, Gert-Jan Pepping, Steven van Andel, Gillian Weir, 2023-06-08 The basic understanding of human movement and control of human movement stems largely from laboratory measurements where human movement can be quantified with high precision and accuracy but where the artificial environment compromises ecological validity A good example for this issue was demonstrated in a recent investigation specifically that the walking gait pattern of healthy individuals in a laboratory changed as a function of how many researchers were present during the experiment Observations like these underscore that study volunteers adapt their behavior to the specific laboratory environment and warrant the question of how well we can transfer our lab based understanding of gait patterns and the underlying neuromuscular control system to walking during daily living Another research area where lab based movement assessments have led to conflicting findings is the field of sports injury prevention Many neuromuscular training programs have been shown to be effective in reducing the sport injury rate in athletes by 30 50% or more in a variety of different multi directional sports Nevertheless lab based assessments of the same athletes who completed those training programs were often not able to detect improvements in motor control of sport specific movements or a reduction in joint loading two factors thought to be closely linked with sport injury risk This disconnect suggests that lab based assessments of movement and motor control are often poor

indicators of player behavior during real game scenarios and may limit our ability to screen athletes for injury risk or monitor their progress in rehabilitation These examples highlight that we should strive for the assessment and investigation of human movement and motor control in natural environments i e where individuals patients athletes or other groups of interest perform explore and interact under real world conditions

Body Tracking in Healthcare Kenton O'Hara,Cecily Morrison,Abigail Sellen,Nadia

Bianchi-Berthouze,Cathy Craig,2022-05-31 Within the context of healthcare there has been a long standing interest in understanding the posture and movement of the human body Gait analysis work over the years has looked to articulate the patterns and parameters of this movement both for a normal healthy body and in a range of movement based disorders In recent years these efforts to understand the moving body have been transformed by significant advances in sensing technologies and computational analysis techniques all offering new ways for the moving body to be tracked measured and interpreted While much of this work has been largely research focused as the field matures we are seeing more shifts into clinical practice As a consequence there is an increasing need to understand these sensing technologies over and above the specific capabilities to track measure and infer patterns of movement in themselves Rather there is an imperative to understand how the material form of these technologies enables them also to be situated in everyday healthcare contexts and practices There are significant mutually interdependent ties between the fundamental characteristics and assumptions of these technologies and the configurations of everyday collaborative practices that are possible them Our attention then must look to social clinical and technical relations pertaining to these various body technologies that may play out in particular ways across a range of different healthcare contexts and stakeholders Our aim in this book is to explore these issues with key examples illustrating how social contexts of use relate to the properties and assumptions bound up in particular choices of body tracking technology We do this through a focus on three core application areas in healthcare assessment rehabilitation and surgical interaction and recent efforts to apply body tracking technologies to them

The History of Video Games

Charlie Fish,2022-10-04 A concise history of the video gaming industry from its niche beginnings to its emergence as a global phenomenon and cultural force The History of Video Games chronicles the dramatic rise of an entertainment industry that has become twice as big and influential as the film and music industries combined Packed with pictures and stats each chapter explores the history of video games through a different lens from the personalities behind the games to the evolution of gamer culture and issues of gender and representation There are stories about the experimental games of the 1950s and 1960s the advent of home gaming in the 1970s the explosion and implosion of arcade gaming in the 1980s the console wars

of the 1990s the growth of online and mobile games in the 2000s and contemporary topics including twitch tv the Gamergate scandal and Fortnite

Gender, Age, and Digital Games in the Domestic Context Alison Harvey, 2015-03-27 Western digital game play has shifted in important ways over the last decade with a plethora of personal devices affording a range of increasingly diverse play experiences Despite the celebration of a more inclusive environment of digital game play very little grounded research has been devoted to the examination of familial play and the domestication of digital games as opposed to evolving public and educational contexts This book is the first study to provide a situated investigation of the site of family play the shared spaces and private places of gameplay within the domestic sphere It carries out an empirically grounded and critical analysis of what marketing and sales discourses about shifts in the digital games audience actually look like in the space of the home as well as the social and cultural role these ludic technologies take in the everyday practices of the family in the domestic context It examines the material realities of video game technologies in the home including time management and spatial organization as well as the discursive role these devices play in discussions of technological competence and its complex relationship to age generational differences and gender performance Harvey s interdisciplinary approach and innovative methodology will hold great critical appeal for those studying digital culture children s media and feminist studies of new media as well as critical theories of technology and leisure and sport theory
