

Homework 10: The Job of a Lens

Name: _____

- Reason.** You and your friends are huddled around a lens trying to look at a pencil. The ray diagram shows object point A and image point A but it is incomplete.

- Label the plane of the lens and the principal axis.
- Label the points "object" or "image".
- Is there anything in space located at image point A?
yes, the image of pencil A

- Four rays leave the object point, pass through the lens, and pass through the image point. Draw arrows on these rays.

- Five of your friends are looking into the lens. Who can see the image of the pencil tip? *eye 3 and 4*

- What are the characteristics of the image they see? (type, attitude)
real, inverted

- Reason.** Now you and your friends try to look at the eraser of the pencil. Object point B and image point B are shown in the ray diagram.

- Draw four rays that leave the object point, refract at the lens, and pass through image point B.

- Who can see the pencil's eraser through the lens?

*eye 1 and 2
can see through
the lens as the
rays pass through
both eyes*

- Two ray diagrams show a central ray: a ray traveling through the centre of a lens. The diagram A is the most realistic. Diagram B uses the thin-lens assumption.

- Describe.** In diagram A, how many times does light refract? Draw each refraction point.
It refracts twice

- Reason.** In diagram A, how does the direction of the outgoing ray compare with the incoming ray?
it is relatively the same

- Explain.** Diagram B shows a central ray using the thin-lens assumption. This is how we will usually draw our central rays. How does diagram B agree with diagram A? Explain.

It agrees with diagram A as the incoming and outgoing rays are the same direction in diagram B

Introduction to Modern Optics Grant R. Fowles, 1989-01-01 This incisive text provides a basic undergraduate level course in modern optics for students in physics technology and engineering The first half of the book deals with classical physical optics the second principally with the quantum nature of light Chapters 1 and 2 treat the propagation of light waves including the concepts of phase and group velocities and the vectorial nature of light Chapter 3 applies the concepts of partial coherence and coherence length to the study of interference and Chapter 4 takes up multiple beam interference and includes Fabry Perot interferometry and multilayer film theory Diffraction and holography are the subjects of Chapter 5 and the propagation of light in material media including crystal and nonlinear optics are central to Chapter 6 Chapters 7 and 8 introduce the quantum theory of light and elementary optical spectra and Chapter 9 explores the theory of light amplification and lasers Chapter 10 briefly outlines ray optics in order to introduce students to the matrix method for treating optical systems and to apply the ray matrix to the study of laser resonators Many applications of the laser to the study of optics are integrated throughout the text The author assumes students have had an intermediate course in electricity and magnetism and some advanced mathematics beyond calculus For classroom use a list of problems is included at the end of each chapter with selected answers at the end of the book

Short-Wave Solar Radiation in the Earth's Atmosphere Irina N. Melnikova, Alexander V. Vasilyev, 2005 Based on data from an experiment which ran for ten years this book summarizes the results of the Atmospheric Physics Department of the St Petersburg University and the Main Geophysical Observatory The processed data now forms a rich dataset of spectral values of radiative characteristics under different atmospheric conditions The analysis of this database clearly shows that the solar radiative absorption in a dusty and cloudy atmosphere is significantly higher than assumed to date Both graduate students of atmospheric sciences as well as scientists and researchers in the field of meteorology and climatology will find a wealth of new data and information in this monograph
