

Para Dynamics® RF Power Scanner Model PDC600

Para Dynamics® Power Scanners have become the recognized standard of quality in the consumer electronics market. All Para Scanners are easy to install (requiring only 2 wire connections) and can be left in-line operation for full-time monitoring of trans output functions.

- 1. Power:** Output RF Power is read from any one of the three power reading scales: 0-10, 0-100, 0-1000 Watts (0-10, 0-100, 0-5000 Watts on PDC6000). The power scales are independently calibrated and factory set at 27 MHz. Each of the three scales can be recalibrated at a different frequency, creating three wattmeters in one.
- 2. Modulation:** The Voice Level Output is indicated on the extremely sensitive modulation meter. Ideal modulation would be 100%. An operator can make compensations in voice level, microphone position, mike gain, or add modulation boosters to achieve more effective talk power.
- 3. Standing Wave Ratio:** SWR is the ratio of maximum to minimum current along the coaxial line. An SWR of 1 to 1 is a perfect impedance match and results in all of the output power of the transmitter being radiated as a good signal. Poor impedance match can cause permanent damage to a transceiver. Para impedance match can cause Scanners with SWR meters enable the fine tuning of antenna systems plus continuous monitoring of the SWR to detect changes due to leaks, oxidations, and weather conditions.
