Evolution Driven by Organismal Behavior Rui Diogo, 2017-03-08 This book proposes a new way to think about evolution. The author carefully brings together evidence from diverse fields of science. In the process he bridges the gaps between many different and usually seen as conflicting ideas to present one integrative theory named ONCE which stands for Organic Nonoptimal Constrained Evolution. The author argues that evolution is mainly driven by the behavioral choices and persistence of organisms themselves in a process in which Darwinian natural selection is mainly a secondary but still crucial evolutionary player. Within ONCE evolution is therefore generally made of mistakes and mismatches and trial and error situations and is not a process where organisms engage in an incessant suffocating struggle in which they can't thrive if they are not optimally adapted to their habitats and the external environment. Therefore this unifying view incorporates a more comprehensive view of the diversity and complexity of life by stressing that organisms are not merely passive evolutionary players under the rule of external factors. This insightful and well reasoned argument is based on numerous fascinating case studies from a wide range of organisms including bacteria, plants, insects and diverse examples from the evolution of our own species. The book has an appeal to researchers, students, teachers and those with an interest in the history and philosophy of science as well as to the broader public as it brings life back into biology by emphasizing that organisms including humans are the key active players in evolution and thus in the future of life on this wonderful planet.      **The Publishers' Circular and Booksellers' Record** , 1911      **Textbook of Organ Transplantation Set** Allan D. Kirk, Stuart J. Knechtle, Christian P. Larsen, Joren C. Madsen, Thomas C. Pearson, Steven A. Webber, 2014-07-21 Brought to you by the world's leading transplant clinicians. Textbook of Organ Transplantation provides a complete and comprehensive overview of modern transplantation in all its complexity from basic science to gold standard surgical techniques to post operative care and from likely outcomes to considerations for transplant program administration, bioethics and health policy. Beautifully produced in full color throughout and with over 600 high quality illustrations it successfully provides a solid overview of what transplant clinicians, surgeons do and with topics presented in an order that a clinician will encounter them. Presents a holistic look at transplantation foregrounding the interrelationships between transplant team members and non surgical clinicians in the subspecialties relevant to pre and post operative patient care such as gastroenterology, nephrology and cardiology. Offers a focused look at pediatric transplantation and identifies the ways in which it significantly differs from transplantation in adults. Includes coverage of essential non clinical topics such as transplant program management and administration, research design and data collection, transplant policy and bioethical issues. Textbook of Organ Transplantation is the market leading and definitive transplantation reference work and essential reading for all transplant surgeons, transplant clinicians, program administrators, basic and clinical investigators and any other members of the transplantation team responsible for the clinical management or scientific study of transplant patients.      *Primary Care - E-Book* Terry Mahan Buttar, Patricia
