

Volcanoes, Plates and earthquakes

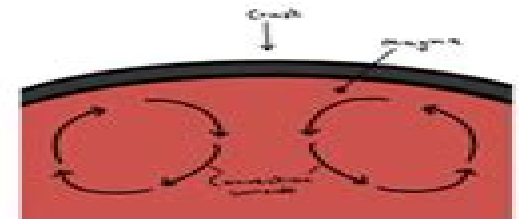

Convection currents

1. Magma is heated. It rises towards the crust
2. As it rises it cools and move sideways
3. The magma cools and sinks back down to the mantle
4. This process then repeats

Plate tectonics

There are three things that happen at plate boundaries.

1. Plates collide
2. Plates separate
3. Plates slide past each other

1. Plates collide

Also known as destructive plates, these plates destroy the crust. Huge pressure is built up here and the heavier plate is pushed back down into the mantle to be reabsorbed. This is called **Subduction**. The lighter plate is lifted up and forms fold mountains.

Formations

Earthquakes and volcanoes

2. Plates separate

Also known as constructive plates, crust is formed. These plates move away from each other and cause a gap in the earth's crust.

Magma rises up from the mantle and fills this gap and forms new crust

Formations:

Volcanic mountains, volcanic islands and mid-ocean ridges

3. Sliding plates

Also known as passive plates, crust isn't created or destroyed here. The plates lock together and then release. This also releases a huge amount of energy.

Formations:

Fault lines and earthquakes

Volcanoes

Pearson Education Enrichment Volcanoes And Plates Answers
