Generation Compilation Evaluation and Dissemination of Data for Science and Technology is a compilation of manuscripts presented at the four proceedings organized by the Committee on Data for Science and Technology CODATA It focuses on the functions of CODATA a data center that operates by generating compiling and evaluating data This book discusses conventional areas of CODATA activity namely the fields of physics chemistry and allied subjects the biological sciences geology geophysics geography and astronomy It includes lectures from the first two sessions giving up to date reviews on data centers particularly the use of computers in a variety of data activities The book also deals with CODATA s original areas of interest spectroscopic and thermodynamic data Information scientists interested in documentation systems will find this book indispensable Free Will and Action Explanation Scott Sehon,2016-04-29 Do we have free will and moral responsibility Is free will compatible with determinism

Scott Sehon argues that we can make progress on these questions by focusing on an underlying issue the nature of action explanation When a person acts or does something on purpose we explain the behavior by citing the agent s reasons The dominant view in philosophy of mind has been to construe such explanations as a species of causal explanation Part I of the book proposes and defends a non causal account of action and agency according to which reason explanation of human behavior is irreducibly teleological rather than causal Part II applies the teleological account of action to free will and responsibility arguing that the free actions the ones for which we are directly responsible are the goal directed actions the actions that are teleologically explicable in terms of our reasons It is then argued that this non causal account of action undermines the appeal of incompatibilist arguments arguments attempting to show that free will is not compatible with determinism Beyond this Sehon argues that the non causal compatibilist account works well in practice it is in accord with our clear intuitions about cases and it both explains and provides guidance in the cases where our intuitions are murkier
