Book Review Index - 2009 Cumulation Dana Ferguson, 2009-08 Book Review Index provides quick access to reviews of books periodicals books on tape and electronic media representing a wide range of popular academic and professional interests The up to date coverage wide scope and inclusion of citations for both newly published and older materials make Book Review Index an exceptionally useful reference tool More than 600 publications are indexed including journals and national general interest publications and newspapers Book Review Index is available in a three issue subscription covering the current year or as an annual cumulation covering the past year

Macromolecular Protein Complexes II: Structure and Function J. Robin Harris, Jon Marles-Wright, 2020-01-14 This book follows on from Volume 83 in the SCBI series Macromolecular Protein Complexes and addresses several important topics such as the Proteasome Anaphase Promoting Complex Ribosome and Apoptosome that were not previously included together with a number of additional exciting topics in this rapidly expanding field of study Although the first SCBI Protein Complex book focused on soluble protein complexes the second Vol 87 addressed Membrane Complexes and the third Vol 88 put the spotlight on Viral Protein and Nucleoprotein Complexes a number of membrane virus and even fibrillar protein complexes have been considered for inclusion in the present book A further book is also under preparation that follows the same pattern in an attempt to provide a thorough coverage of the subject Chapter 9 is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com

Macromolecular Protein Complexes J. Robin Harris, Jon Marles-Wright, 2017-03-07 This volume of the established Subcellular Biochemistry series presents 20 chapters dealing with a broad range of interesting protein complexes It will enable researchers to readily appreciate the major contribution from both X ray crystallography and cryo electron microscopy in this field of study The biological significance of these structural studies is emphasised throughout the book The diversity of the material included here indicates the breadth of this field and the tremendous progress that has been made in recent years The book is directed primarily to advanced students and researchers in structural biology and others in the biochemical sciences It will be supplemented by other related books within the Subcellular Biochemistry series One of the Editors JM W is actively involved in structural biology and the other JRH as a retired academic and the Series Editor of Subcellular Biochemistry has long experience at editing multi author books

Macromolecular Protein Complexes IV J. Robin Harris, Jon Marles-Wright, 2022-09-23 This book covers the latest findings of a wide variety of viral prokaryotic and eukaryotic macromolecular protein complexes and builds upon the solid macromolecular foundations established by previous volumes of the Subcellular Biochemistry series Thus an almost encyclopaedic coverage of the broad field of protein complex structure and function has been established The 17 interesting chapters included in this book have been organised into four sections Soluble Protein Complexes Membrane Protein Complexes Fibrous Protein Complexes and Viral Protein Complexes Significant

topics present here are Fatty Acid Synthase the Fork Protection Complex Ribonucleotide Reductase the Kinetochore G proteins the FtsEX Complex the Kainate Receptor the Photosystem I antenna the Mycobacterial Arabinofuranosyltransferases the the Bacterial Flagellum the Actomyosin Complex Motile Cilia SLS Collagen Polymorphic Structures and the Reovirus Capsid and Polymerase Up dates expansion of chapter topics present in earlier volumes are now included in chapters here e g those on Ferritin like proteins and the Multi tRNA Synthetase The book is richly illustrated throughout the result of an impressive integration of structural data from X ray crystallography and cryo electron microscopy The functional aspects of protein protein interactions are also given a high priority

Introduction to Proteins Amit Kessel, Nir Ben-Tal, 2010-12-17 As the tools and techniques of structural biophysics assume greater roles in biological research and a range of application areas learning how proteins behave becomes crucial to understanding their connection to the most basic and important aspects of life With more than 350 color images throughout *Introduction to Proteins Structure Function and Motion* presents a unified in depth treatment of the relationship between the structure dynamics and function of proteins Taking a structural biophysical approach the authors discuss the molecular interactions and thermodynamic changes that transpire in these highly complex molecules The text incorporates various biochemical physical functional and medical aspects It covers different levels of protein structure current methods for structure determination energetics of protein structure protein folding and folded state dynamics and the functions of intrinsically unstructured proteins The authors also clarify the structure function relationship of proteins by presenting the principles of protein action in the form of guidelines This comprehensive color book uses numerous proteins as examples to illustrate the topics and principles and to show how proteins can be analyzed in multiple ways It refers to many everyday applications of proteins and enzymes in medical disorders drugs toxins chemical warfare and animal behavior Downloadable questions for each chapter are available at CRC Press Online

Introduction to Proteins Amit Kessel, Nir Ben-Tal, 2018-03-22 *Introduction to Proteins* provides a comprehensive and state of the art introduction to the structure function and motion of proteins for students faculty and researchers at all levels The book covers proteins and enzymes across a wide range of contexts and applications including medical disorders drugs toxins chemical warfare and animal behavior Each chapter includes a Summary Exercises and References New features in the thoroughly updated second edition include A brand new chapter on enzymatic catalysis describing enzyme biochemistry classification kinetics thermodynamics mechanisms and applications in medicine and other industries These are accompanied by multiple animations of biochemical reactions and mechanisms accessible via embedded QR codes which can be viewed by smartphones An in depth discussion of G protein coupled receptors GPCRs A wider scale description of biochemical and biophysical methods for studying proteins including fully accessible internet based resources such as databases and algorithms Animations of protein dynamics and conformational changes accessible via embedded QR codes Additional features Extensive discussion of the energetics of protein folding stability and interactions A comprehensive

view of membrane proteins with emphasis on structure function relationship Coverage of intrinsically unstructured proteins providing a complete realistic view of the proteome and its underlying functions Exploration of industrial applications of protein engineering and rational drug design Each chapter includes a Summary Exercises and References Approximately 300 color images Downloadable solutions manual available at www.crcpress.com For more information including all presentations tables animations and exercises as well as a complete teaching course on proteins structure and function please visit the author's website Praise for the first edition This book captures in a very accessible way a growing body of literature on the structure function and motion of proteins This is a superb publication that would be very useful to undergraduates graduate students postdoctoral researchers and instructors involved in structural biology or biophysics courses or in research on protein structure function relationships David Sheehan ChemBioChem 2011 Introduction to Proteins is an excellent state of the art choice for students faculty or researchers needing a monograph on protein structure This is an immensely informative thoroughly researched up to date text with broad coverage and remarkable depth Introduction to Proteins would provide an excellent basis for an upper level or graduate course on protein structure and a valuable addition to the libraries of professionals interested in this centrally important field Eric Martz Biochemistry and Molecular Biology Education 2012 **Multiple Equilibria in Proteins** Jacinto Steinhart, Jacqueline A.

Reynolds, 2014-06-28 Multiple Equilibria in Proteins covers the multiple interactions between small ions and molecules and a protein molecule The book also deals with the physicochemical mechanisms of this interaction and the information about protein structure and the forces stabilizing that structure The text discusses the mathematical description of complex formation the thermodynamic analysis of binding data and various theoretical models which can be used to describe the phenomena of small molecule macromolecule interactions The measurement of complex formation the binding of neutral molecules and hydrogen ion equilibria are also considered The book further tackles metal ion binding the binding of organic ions by proteins as well as protein protein interaction Chemists and biochemists will find the book useful Macromolecular Protein Complexes V J. Robin Harris, Jon Marles-Wright, 2024-07-04 This volume in the Subcellular Biochemistry SCBI series is a continuation of several previous volumes devoted to the structural and functional study of protein complexes The expanding nature of this field of study derived mainly from X ray crystallography and electron cryomicroscopy justifies the continuing expansion of coverage in an almost encyclopaedic manner within the SCBI series Experienced and active researchers in the field shed light on the biology of protein complexes involved in important cellular functions from different perspectives such as AcrAB TolC and CST Other topics covered are the Toxin Antitoxin systems in cell survival the role of the ATPases CueR and RuvBL1 RuvBL2 in the regulation of gene expression complexes with multiple functions in the cell such as VCP p97 or the Vault complex FtsA and FtsZ in bacterial cell division GATOR1 and GATOR2 in amino acid sensing TRPA1 and the Serotonin Transporter in signaling oligomeric structures in eukaryotic cells such as amyloids and invertases among

others The book is richly illustrated the result of an impressive integration of structural data from X ray crystallography and cryo electron microscopy Functional aspects of protein protein interactions are also featured prominently providing a valuable contribution for researchers and scholars Chapter 13 is available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com)

Bruno Jirgensons, 2012-08-11 The application of circular dichroism CD to various problems involving conformation of proteins and other biopolymers is emphasized in this revised and enlarged second edition The usefulness of CD and ORD in helping to solve structural problems is demonstrated by many examples and the most essential data are tabulated The author is sincerely grateful to the editors of the series Molecular Biology Biochemistry and Biophysics especially to Professor GEORG F SPRINGER M D for their interest in this edition as well as to the many reviewers for their constructive criticism of the first edition of this book Our previously unpublished work reported in this second edition was supported in part by grants from the R A Welch Foundation grant G 051 and U S Public Health Service grant CA 01785 Houston September 1973 B JIRGENSONS Preface to the First Edition Great advances have been made in the application of physical methods in the study of the structure of proteins and other biological macromolecules Optical rotatory dispersion has been successful in solving structural problems and a vast amount of literature has accumulated on this subject Several review articles appeared between 1961 and 1965 but significant progress has been made since 1965 Important new studies especially on the Cotton effects in the far ultraviolet spectrum have rendered many previous publications obsolete so that a concise monograph should be useful at this time
