4. Starting the G1 GPS Sensor

The G1 sensor uses GPS (Global Positioning System) technology to measure speed and distance in real time, in total kilometers or miles. Its precision will reach one meter.

The battery of the G1 has an average life of 100 days. The G1 is waterproof and its solid design makes it resistant to most shocks and scratches.

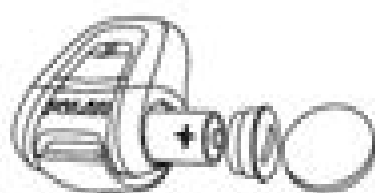

The button located in the back of the G1 allows you either to start the G1 on your own using the strap provided or to fix it on a stable in loop.

Open the G1 buckle and pass the strap through the loop (shown on the video).

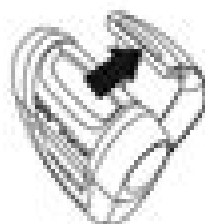

Put it enough time in your own car to through it.

To ensure good detection of the GPS signal, the G1 (shown) by covered and should be placed with the Polar logo in an upright position. (the also recommend wearing it on the same way as the RS300X receiver).

Press the button 2 seconds to start (or stop) the G1. A green light indicating battery status (B) flashes for a few seconds. Following this, a red light indicating detection status (A) appears and shows that the G1 is searching for GPS signal.

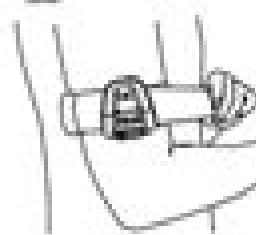

Use a coin to unscrew and open the metal battery cover. Place the CR2 battery as indicated and make the metal cover back into place.

To ensure a good detection of the GPS signal, the G1 should not be covered or kept under clothes.

Then adjust the size of the strap as the G1 can't move when placed on your arm.

Your G1 is now ready for use.

Start mode. Once the GPS signal has been found (after 1 minute in average), the light (A) turns green.

Note: The light indicating battery status (B) turns red when the battery is low.
