Using Substances to Enhance Performance: A Psychology of Neuroenhancement Ralf Brand, 2017-01-18 Neuroenhancement NE is a behavior conceptualized as the use of a potentially psychoactive substance to enhance ones already proficient cognitive capacities Depending on the specific definitions used prevalence estimates vary greatly between very low 0.3% for illicit substances to astonishingly high 89% for freely available lifestyle substances These variations indicate that further research and more

conceptual and theoretical clarification of the NE construct is dearly needed The contributions of this research topic aim to do just that Specific questions addressed are How prevalent is NE behavior How can NE research profit from the already more evolved field of social science research on doping in sports How is NE perceived by the public What psychological processes and variables play a role in the decision to neuroenhance A wide array of methodological approaches is used to investigate these questions The topics contributions range from theoretical to experimental accounts on NE and they utilize a diverse set of methods ranging from qualitative to neuroscientific approaches The research presented here represents a first step towards what we have labeled a psychological approach to NE By addressing the questions above this research topic hopefully advances our understanding of NE behavior As with every new field of research new answers always prompt new questions In light of what we know now about NE we hope that the findings presented here will be pursued by other researchers in the future Clearly the endeavor to understand NE behavior has only just begun

Cognitive Enhancement

Fabrice Jotterand, Veljko Dubljevic, 2016-05-09 There is a growing literature in neuroethics dealing with cognitive neuro enhancement for healthy adults However discussions on this topic tend to focus on abstract theoretical positions while concrete policy proposals and detailed models are scarce Furthermore discussions appear to rely solely on data from the US or UK while international perspectives are mostly non existent This volume fills this gap and addresses issues on cognitive enhancement comprehensively in three important ways 1 it examines the conceptual implications stemming from competing points of view about the nature and goals of enhancement 2 it addresses the ethical social and legal implications of neuroenhancement from an international and global perspective including contributions from scholars in Africa Asia Australia Europe North America and South America and 3 it discusses and analyzes concrete legal issues and policy options tailored to specific contexts

Augmentation of

Brain Function: Facts, Fiction and Controversy Ioan Opris, Manuel F. Casanova, Mikhail Lebedev , 2018-09-14 The Volume II is entitled Neurostimulation and pharmacological approaches This volume describes augmentation approaches where improvements in brain functions are achieved by modulation of brain circuits with electrical or optical stimulation or pharmacological agents Activation of brain circuits with electrical currents is a conventional approach that includes such methods as i intracortical microstimulation ICMS ii transcranial direct current stimulation tDCS and iii transcranial magnetic stimulation TMS tDCS and TMS are often regarded as noninvasive methods Yet they may induce long lasting plastic changes

in the brain This is why some authors consider the term noninvasive misleading when used to describe these and other techniques such as stimulation with transcranial lasers The volume further discusses the potential of neurostimulation as a research tool in the studies of perception cognition and behavior Additionally a notion is expressed that brain augmentation with stimulation cannot be described as a net zero sum proposition where brain resources are reallocated in such a way that gains in one function are balanced by costs elsewhere In recent years optogenetic methods have received an increased attention and several articles in Volume II cover different aspects of this technique While new optogenetic methods are being developed the classical electrical stimulation has already been utilized in many clinically relevant applications like the vestibular implant and tactile neuroprosthesis that utilizes ICMS As a peculiar usage of neurostimulation and pharmacological methods Volume II includes several articles on augmented memory Memory prostheses are a popular recent development in the stimulation based BMIs For example in a hippocampal memory prosthesis memory content is extracted from hippocampal activity using a multiple input multiple output non linear dynamical model As to the pharmacological approaches to augmenting memory and cognition the pros and cons of using nootropic drugs are discussed

Curing Student Underachievement Philip Esbrandt, Bruce Hayes, 2011-12-15 Cure Student Underachievement is the culmination of the authors research practice and experience as principals superintendents graduate professors and consultants in efforts to improve school performance and increase student achievement Searching for the real causes of underperformance the authors explored problem solving strategies in several fields The authors find that clinical practice identifies the root causes rather than the symptoms of problems focusing valuable time resource and energy on prescriptions with greater promise for improved performance health The concepts of diagnosis prescription and prognosis establish a foundation for improved planning and problem solving This book introduces practicing leaders and leaders in training to the protocols of clinical practice by taking the reader through the twelve steps of the clinical cycle with specific strategies and exercises to provide practice in the application use and assessment of the model

The Role of Protein and Amino Acids in Sustaining and Enhancing Performance Institute of Medicine, Committee on Military Nutrition Research, 1999-09-15 It is a commonly held belief that athletes particularly body builders have greater requirements for dietary protein than sedentary individuals However the evidence in support of this contention is controversial This book is the latest in a series of publications designed to inform both civilian and military scientists and personnel about issues related to nutrition and military service Among the many other stressors they experience soldiers face unique nutritional demands during combat Of particular concern is the role that dietary protein might play in controlling muscle mass and strength response to injury and infection and cognitive performance The first part of the book contains the committee s summary of the workshop responses to the Army s questions conclusions and recommendations The remainder of the book contains papers contributed by speakers at the workshop on such topics as the effects of aging and hormones on regulation of muscle mass and function alterations in protein metabolism

due to the stress of injury or infection the role of individual amino acids the components of proteins as neurotransmitters hormones and modulators of various physiological processes and the efficacy and safety considerations associated with dietary supplements aimed at enhancing performance Federal Student Aid, & Direct Student Loans (2 reports together)
