

# Basic Performance Equation

---

- CPU Time =  $I * CPI * T$ 
  - »  $I$  = number of instructions in program
  - »  $CPI$  = average cycles per instruction
  - »  $T$  = clock cycle time
- CPU Time =  $I * CPI / R$ 
  - »  $R = 1/T$  the clock rate
    - $T$  or  $R$  are usually published as performance measures for a processor
    - $I$  requires special profiling software
    - $CPI$  depends on many factors (including memory).

If you are familiar with an earlier release of SOLIDWORKS, you still might want to skim Chapter 1 to become acquainted with some of the commands, menus, and features that you have not used, or you can simply jump to any section in any chapter. Each chapter provides detailed PropertyManager information on key topics with individual stand-alone short tutorials to reinforce and demonstrate the functionality and ease of the SOLIDWORKS tool or feature. The book provides access to over 260 models, their solutions, and additional support materials. Learn by doing, not just by reading. Formulate the skills to create, modify, and edit sketches and solid features. Learn the techniques to reuse features, parts, and assemblies through symmetry, patterns, copied components, design tables, configurations, and more. The book is designed to complement the Online Tutorials and Online Help contained in SOLIDWORKS 2019. The goal is to illustrate how multiple design situations and systematic steps combine to produce successful designs. The author developed the tutorials by combining his own industry experience with the knowledge of engineers, department managers, professors, vendors, and manufacturers. He is directly involved with SOLIDWORKS every day, and his responsibilities go far beyond the creation of just a 3D model.
