PHYSICAL AND CHEMICAL PROPERTIES

When studying matter, scientists often describe how it behaves. These properties can be divided into physical and chemical properties.

Physical properties are characteristics of a substance that can be observed or measured without changing the substance into something else. Examples of physical properties include color, shape, size, and texture. For instance, the color of a substance is a physical property. Other examples of physical properties include melting point, boiling point, and density. Whether something is a solid, liquid, or gas is also a physical property.
