

Membrane Function

How does the cell membrane control movement of materials?

Why?

The membrane is critical to the maintenance of homeostasis in living organisms. The cell membrane separates the cell from the external environment and plays a critical role in regulating movement of material in and out of the cell. Additionally, eukaryotic cells are made complex by the presence of internal membranes that form organelles, so the cells may become specialized. These organelle membranes create compartments within the cell that can do specific functions.

Model 1 – Types of Ions and Molecules in a Cell

Type 1 Ions	Type 2 Molecules	Type 3 Molecules	Type 4 Molecules
Potassium: K^+	Glucose: 	Water:  Urea: 	Molecular oxygen (O_2): $O=O$ Carbon dioxide (CO_2): $O=C=O$
Sodium: Na^+			
Calcium: Ca^{2+}			
Chloride: Cl^-			
Polar	polar	Polar	nonpolar
small	large	small	small

- Consider the ions and molecules in Model 1.
 - Identify at least two substances that would need to move into a cell to maintain homeostasis.

The two substances that would need to move into a cell to maintain homeostasis are.. Oxygen, water, sugar, and ions.

- Briefly explain why the cell needs each of the substances you identified in part a.

Oxygen, water, and glucose are necessary for cellular respiration; and ions for energy.

- Consider the ions and molecules in Model 1.
 - Identify at least two substances that would need to move out of a cell to maintain homeostasis.

Carbon dioxide, water, ions, and urea would need to come out of the cell.

- Briefly explain the source of the molecules you identified in part a.

Water and carbon dioxide are a byproduct of cellular respiration

- Complete the table by labeling the types of substances as polar or nonpolar and large or small.

Ritchie, P. Magistretti, L. Bolis, 2012-12-02 A critical factor in cell to cell interactions is the presence in the cell membrane of highly specific ion channels controlled by specific receptors that are bound to and activated by a gamut of external hormones and neurotransmitters Through both this action on ion channels and action on other membrane components such as G proteins extracellular signals alter intracellular events usually through the mediation of second messengers and so provide the basis for the transduction mechanism connecting extracellular signals with intracellular effectors This volume deals with the various ways that such membrane function is controlled **The Molecular Basis of Membrane Function** Society of General Physiologists, 1969 **The Structural Basis of Membrane Function** Youssef Hatafi, 2012-12-02 The Structural Basis of Membrane Function is a documentation of an international symposium of the same title This book serves as a collection of the significant articles pertaining to the field of membrane research It is composed of seven parts where the first and last parts are articles contributed by scientific authorities The book generally discusses the membrane research and this study s relevance to the society Then the book specifically looks into membrane features including its structure processes in it functions and types Some of the specific topics included in the discussion of each part are phospholipases and monolayers used in studies of membrane structure molecular aspects of active transport and electron transfer in energy transducing membranes The book also explains the two functions in common of biological membranes synaptic receptor proteins and liver microsomal membranes The scope of this book is broad and helpful to many fields of scienc It will be of great benefit to students teachers scientists and researchers in the field of biochemistry biology molecular biology chemistry pharmacology and cellular biology among others Structure and Function of Biological Membranes Lawrence I. Membrane Permeability: 100 Years Since Ernest Overton, 1999-05-21 Membrane permeability is fundamental to all cell biology and subcellular biology The cell exists as a closed unit Import and export depend upon a number of sophisticated mechanisms such as active transport endocytosis exocytosis and

passive diffusion These systems are critical for the normal housekeeping physiological functions However access to the cell is also taken advantage of by toxic microbes such as cholera or ptomaine and when designing drugs Ernest Overton one of the pioneers in lipid membrane research put forward the first comprehensive theory of lipid membrane structure His most quoted paper on the osmotic properties of cells laid the foundation for the modern concepts of membrane function most notably important in anesthesia This book is designed to celebrate the centennial anniversary in the first chapter of Overton s work Subsequent chapters present readers with up to date concepts of membrane structure and function and the challenge they pose for new explorations Provides an historical perspective of Overton s contributions to the theory of narcosis Presents an overview of each permeability mechanism including active transport endocytosis exocytosis and passive diffusion

Moller, 2012-12-06 The plasma membrane forms the living barrier between the cell and its surroundings For this reason it has a wide range of important functions related to the regulation of the composition of the cell interior and to communication with the cell exterior The plasma membrane has therefore attracted a lot of research interest Until the early 1970 s it was only possible to study the plasma membrane in situ its structure e g by electron microscopy and its function e g by uptake of radioactively labeled compounds into the intact cell or tissue The first isolation of plant protoplasts by enzymatic digestion of the cell wall in the early 1970 s was an important step forward in that it provided direct access to the outer surface of the plasma membrane More importantly T K Hodges and R J Leonard in 1972 published the description of a method by which a fraction enriched in plasma membranes could be isolated from plant tissues using sucrose gradient centrifugation As a result the 1970 s saw a

leap forward in our understanding of the structure and function of the plasma membrane In 1981 S Widell and C Larsson published the first of a series of papers in which plasma membrane vesicles of high yield and purity were isolated from a wide range of plant tissues using aqueous polymer two phase partitioning
