

The Electromagnetic Spectrum POGIL Activity

Wavelength (λ) - Units: m, cm, nm

Frequency (ν) - the # of waves that pass a given point in one second.

Units: Hz, sec^{-1} , waves/sec, 1/sec

The relationship between frequency (f) and wavelength (λ) of a wave is described by the equation

$$\text{Waves speed} = \text{frequency} \times \text{wavelength} \quad \text{OR} \quad c = \nu \lambda$$

All electromagnetic radiation propagates at a speed of $c = 3.00 \times 10^8$ m/sec (approximately 186,000 miles per second) this is called the speed of light!

When solving problems using c (the speed of light) ν MUST be in Hz or sec^{-1} and λ MUST be in meters.

Problems

1. What is the wavelength of radiation with a frequency of $6.24 \times 10^{13} \text{ sec}^{-1}$?
2. What is the frequency of radiation with a wavelength of 2.20×10^{-6} nm? (1 nm = 10^{-9} m or $10^9\text{nm}=1\text{m}$)
3. A television relay transmitter operates at a frequency of 927.9 MHz. Calculate the wavelength of the signal in nanometers. Is this visible light? (1 MHz = 1,000,000 Hz)

Invisible Universe Stephen M. Pompea, Alan Gould, Lincoln Bergman, 2002 The 5 class sessions of 45 60 minutes each deepen student understanding of the electromagnetic spectrum enabling students to detect and consider wavelengths other than visible light Activities feature energy stations including infrared TV remote microwave pager ultraviolet black light and other devices Students come up with their own tests to see what blocks each wavelength and what does not They learn how these other wavelengths can be used to see things we cannot see with our eyes

EM Spectrum Jeremiah Hilderman, 2021-05-04 The book reassesses the Kelvin temperature scale by spectrum for wider application The idea occurred to the author to revise the temperature scale where the Kelvin scale is no longer practical because a true temperature scale must be based upon electromagnetic radiation and the Kelvin scale is not based on the EM Spectrum The Kelvin scale is based on a foggy notion of absolute zero temperature in which there is no motion inside of atoms Kelvin s scale is based on no motion not on the electromagnetic spectrum and thus is flawed So in the pursuit of a true scale I ventured into a review of the Electromagnetic Spectrum and several new ideas came forth the most astounding of these new ideas is the bifurcation of the spectrum into radio waves versus all other waves of EM

Electromagnetic Fields and Life A. Presman, 2013-06-29 A broad region of the electromagnetic spectrum long assumed to have no influence on living systems under natural conditions has been critically re-examined over the past decade This spectral region extends from the superhigh radio frequencies through decreasing frequencies to and including essentially static electric and magnetic fields The author of this monograph A S Presman has reviewed not only the extensive Russian literature but also almost equally comprehensively the non Russian literature dealing with biological influences of these fields Treated also is literature shedding some light on possible theoretical foundations for these phenomena A substantial rapidly increasing number of studies in many laboratories and countries has now clearly established biological influences which are independent of the theoretically predictable simple thermal effects Indeed many of the effects are produced by field strengths very close to those within the natural environment The author has even more importantly set forth a novel imaginative general hypothesis in which it is postulated that such electromagnetic fields normally serve as conveyors of information from the environment to the organism within the organism and among organisms He postulates that in the

course of evolution organisms have come to employ these fields in conjunction with the well known sensory nervous and endocrine systems in effecting coordination and integration
