

POGIL: Dynamic Equilibrium

The word "dynamic" means that a system is in motion. The word "equilibrium" means that the system is stable and does not change. When opposing forces or issues are balanced, a system is said to be in equilibrium. So the question becomes, "How can there be a system that's in motion and in equilibrium at the same time?"

If the forward and reverse processes of a reversible process are occurring, then the system is said to be "dynamic." If the forward and reverse reactions are occurring simultaneously at the same rates, then the system is in a state of "equilibrium."

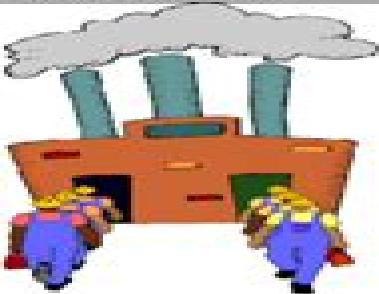

Equilibrium exists when the rate of the forward reaction equals the rate of the reverse reaction.

VERY IMPORTANT: *Equilibrium DOES NOT MEAN that there is the same amount of reactants and products.*

A dynamic equilibrium means that the amounts of reactant and products are staying constant even though the reaction is still going.
