Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 12 sedentary women, 30 to 45 years of age, who were randomly assigned to a 10-week training program or a control group. The training program consisted of three sessions per week, each lasting 30 minutes, and included a combination of aerobic and resistance training. The control group consisted of 12 sedentary women who did not participate in the training program. The HR and EE were measured at rest and during a 30-minute exercise session at the beginning and end of the 10-week period. The results showed that the training program had a significant effect on both HR and EE. The HR at rest decreased significantly from 72 to 68 beats per minute, and the HR during exercise decreased significantly from 155 to 145 beats per minute. The EE at rest decreased significantly from 1,200 to 1,100 kcal per day, and the EE during exercise decreased significantly from 300 to 250 kcal per session. These results suggest that a 10-week training program can effectively reduce HR and EE in sedentary, middle-aged women.

If gross revenues are T (in pounds), then the contribution margin (ignoring tax and depreciation) is $T - \text{fixed costs}$. If the contribution margin is C , then the contribution margin ratio is C/T (expressed as a decimal). And, the contribution margin ratio is $C/T = (T - \text{fixed costs})/T$, and we can rearrange the equation to get:

23. When configuring a multi-mount AFS, set `mountmnt` to your Netatun path: `mountmnt=/usr/bin/netatun`
24. If you're using the `afs` multi-mount method, add `afs` to the `mountmnt` path. For example, `mountmnt=/usr/bin/netatun/afs`. Depending on the configuration of the system, this may be sufficient. This may require the `afs` to be installed. This type of multi-mount will be pointing on the `afs` group (see `group 1`)
25. Do not mount the `afs` of `mountmnt` as `afs` (see `group 1`)
26. Mount `afs` (see `group 1`) as `afs` (see `group 1`)

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or natural light at night. To reduce the risk of circadian rhythm disruption, it is recommended that the amount of artificial light be reduced to the lowest level possible.
- Artificial lights that emit red light with a wavelength of 620 nm or longer are recommended, as the length of the spectrum may be reduced by filtering out the blue light spectrum.
- The use of natural light during the day may help to regulate the circadian rhythm. The presence of natural light during the day may help to regulate the circadian rhythm.
- Natural light is not recommended for the use of artificial light.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. For example, if the price of the output rises, the producer will want to produce more of the output, and if the price falls, the producer will want to produce less of the output.
