Write the answers for each of the questions below. You will be asked to write answers for the questions below. **Remember: write your answers in the spaces provided for each question.**

1. The Population Cycle

a) The **population cycle** is a series of regular, predictable fluctuations in population size. It is a cycle of high and low population sizes, with the high population sizes being followed by low population sizes. The cycle is caused by a combination of factors, including changes in birth and death rates, changes in immigration and emigration, and changes in the environment. The cycle is a key feature of many populations, and it is important to understand it in order to manage them.
