Pirate Philosophy Gary Hall, 2016-04-15 How philosophers and theorists can find new models for the creation publication and dissemination of knowledge challenging the received ideas of originality authorship and the book In *Pirate Philosophy* Gary Hall considers whether the fight against the neoliberal corporatization of higher education in fact requires scholars to transform their own lives and labor Is there a way for philosophers and theorists to act not just for or with the antiausterity and student protestors graduates without a future but in terms of their political struggles Drawing on such phenomena as peer to peer file sharing and anticopyright pro piracy movements Hall explores how those in academia can move beyond finding new ways of thinking about the world to find instead new ways of being theorists and philosophers in the world Hall describes the politics of online sharing the battles against the current intellectual property regime and the actions of Anonymous LulzSec Aaron Swartz and others and he explains Creative Commons and the open access open source and free software movements But in the heart of the book he considers how when it comes to scholarly ways of creating performing and sharing knowledge philosophers and theorists can challenge not just the neoliberal model of the entrepreneurial academic but also the traditional humanist model with its received ideas of proprietorial authorship the book

originality fixity and the finished object In other words can scholars and students today become something like pirate philosophers

Biological Nitrogen Fixation Frans J. de Bruijn, 2015-06-12 Nitrogen is arguably the most important nutrient required by plants However the availability of nitrogen is limited in many soils and although the earth's atmosphere consists of 78.1% nitrogen gas N_2 plants are unable to use this form of nitrogen To compensate modern agriculture has been highly reliant on industrial nitrogen fertilizers to achieve maximum crop productivity However a great deal of fossil fuel is required for the production and delivery of nitrogen fertilizer Moreover carbon dioxide CO_2 which is released during fossil fuel combustion contributes to the greenhouse effect and run off of nitrate leads to eutrophication of the waterways Biological nitrogen fixation is an alternative to nitrogen fertilizer It is carried out by prokaryotes using an enzyme complex called nitrogenase and results in atmospheric N_2 being reduced into a form of nitrogen diazotrophic organisms and plants are able to use ammonia It is this process and its major players which will be discussed in this book *Biological Nitrogen Fixation* is a comprehensive two volume work bringing together both review and original research articles on key topics in nitrogen fixation Chapters across both volumes emphasize molecular techniques and advanced biochemical analysis approaches applicable to various aspects of biological nitrogen fixation Volume 1 explores the chemistry and biochemistry of nitrogenases nif gene regulation the taxonomy evolution and genomics of nitrogen fixing organisms as well as their physiology and metabolism Volume 2 covers the symbiotic interaction of nitrogen fixing organisms with their host plants including nodulation and symbiotic nitrogen fixation plant and microbial omics cyanobacteria diazotrophs and non legumes field studies and inoculum preparation as well as nitrogen fixation and cereals Covering the full breadth of current nitrogen fixation research and expanding it towards future advances in the field *Biological Nitrogen Fixation* will be a one stop reference for microbial ecologists and environmental microbiologists as well as plant and agricultural researchers working on crop sustainability
