Moafrika ,2007 **Eastern Africa Social Science Research Review** ,1992 **Planning the Family in Egypt** Kamran Asdar Ali,2013-11-06 In this ethnographic study the author examines the policies and practices of family planning programs in Egypt to see how an elitist Western informed state attempts to create obliging citizens The state sees voluntary compliance with the law for the common good as the cornerstone of modernity Family planning programs are a training

ground for the construction of self disciplined individuals and thus a rewarding area of study for the fate of social programs in developing countries Through a careful examination of state endorsed family planning practices in urban and rural contexts the author shows us the pervasive high pressure persuasion of women who are encouraged to think as individual decision makers of their immediate families and their national interests But what of the other forces at work in these women s lives binding them to their extended families and to their religious identities And what of the laws that allow for polygamy and discriminate against women in marriage inheritance and as part of the workforce These forces operate against the received wisdom of the state Is the Muslim community thought to end at the borders of Egypt What about local constructions of masculinity when the state appeals to wives to decide for themselves How does widespread labor migration to foreign countries affect attitudes toward family planning How is female contraception viewed by the Islamic Brotherhood and other modern Muslim groups This book questions much that we have taken for granted and gives us grounds for reexamining our assumptions about family planning and the individual and state in developing countries such as Egypt **Popular**

Anne Katzenberg,2024-06-24 Humans are unique among animals for the wide diversity of foods and food preparation techniques that are intertwined with regional cultural distinctions around the world The Oxford Handbook of the Archaeology of Diet explores evidence for human diet from our earliest ancestors through the dispersal of our species across the globe As populations expanded people encountered new plants and animals and learned how to exploit them for food and other resources Today globalization aside the results manifest in a wide array of traditional cuisines based on locally available indigenous and domesticated plants and animals How did this complexity emerge When did early hominins actively incorporate animal foods into their diets and later exploit marine and freshwater resources What were the effects of reliance on domesticated grains such as maize and rice on past populations and the health of individuals How did a domesticated plant like maize move from its place of origin to the northernmost regions where it can be grown Importantly how do we discover this information and what can be deduced about human health biology and cultural practices in the past and present Such questions are explored in thirty three chapters written by leading researchers in the study of human dietary adaptations The approaches encompass everything from information gleaned from comparisons with our nearest primate relatives tools used in procuring and preparing foods skeletal remains chemical or genetic indicators of diet and genetic variation and modern or historical ethnographic observations Examples are drawn from across the globe and information on
