Evolutionary Feedbacks Between Population Biology and Genome Architecture Tariq Ezaz,Scott V. Edwards,2018-12-06 This eBook presents all 10 articles published under the Frontiers Research Topic Evolutionary Feedbacks Between Population Biology and Genome Architecture edited by Scott V Edwards and Tariq Ezaz With the rise of rapid genome sequencing across the Tree of Life challenges arise in understanding the major evolutionary forces influencing the structure of microbial and eukaryotic genomes in particular the prevalence of natural selection versus genetic drift in shaping those genomes Additional complexities in understanding genome architecture arise with the increasing incidence of interspecific hybridization as a force for shaping genotypes and phenotypes A key paradigm shift facilitating a more nuanced interpretation of genomes came with the rise of the nearly neutral theory in the 1970s followed by a greater appreciation for the contribution of nonadaptive forces such as genetic drift to genome structure in the 1990s and 2000s The articles published in this eBook grapple with these issues and provide an update as to the ways in which modern population genetics and genome informatics deepen our understanding of the subtle interplay between these myriad forces From intraspecific to macroevolutionary studies population biology and population genetics are now major tools for understanding the broad landscape of how genomes evolve across the Tree of Life This volume is a celebration across diverse taxa of the contributions of population genetics thinking to genome studies We hope it spurs additional research and clarity in the ongoing search for rules governing the evolution of genomes Vorontsov's Who is who in biodiversity sciences in Azerbaijan, Armenia, Belarus, Estonia, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, Uzbekistan Irina Yu. Bakloushinskaya,David W. Minter,2001-01-01 **Stability in Model Populations** Laurence D. Mueller,Amitabh Joshi,2020-03-31 Throughout the twentieth century biologists investigated the mechanisms that stabilize

biological populations populations which if unchecked by such agencies as competition and predation should grow geometrically How is order in nature maintained in the face of the seemingly disorderly struggle for existence In this book Laurence Mueller and Amitabh Joshi examine current theories of population stability and show how recent laboratory research on model populations particularly blowflies *Tribolium* and *Drosophila* contributes to our understanding of population dynamics and the evolution of stability The authors review the general theory of population stability and critically analyze techniques for inferring whether a given population is in balance or not They then show how rigorous empirical research can reveal both the proximal causes of stability how populations are regulated and maintained at an equilibrium including the relative roles of biotic and abiotic factors and its ultimate mostly evolutionary causes In the process they describe experimental studies on model systems that address the effects of age structure inbreeding resource levels and population structure on the stability and persistence of populations The discussion incorporates the authors own findings on the evolution of population stability in *Drosophila* They go on to relate laboratory work to studies of animals in the wild and to develop a general framework for relating the life history and ecology of a species to its population dynamics This accessible finely written illustration of how carefully designed experiments can improve theory will have tremendous value for all ecologists and evolutionary biologists

Race? Ian Tattersall, Rob DeSalle, 2011-09-01 Race has provided the rationale and excuse for some of the worst atrocities in human history Yet according to many biologists physical anthropologists and geneticists there is no valid scientific justification for the concept of race To be more precise although there is clearly some physical basis for the variations that underlie perceptions of race clear boundaries among races remain highly elusive from a purely biological standpoint Differences among human populations that people intuitively view as racial are not only superficial but are also of astonishingly recent origin In this intriguing and highly accessible book physical anthropologist Ian Tattersall and geneticist Rob DeSalle both senior scholars from the American Museum of Natural History explain what human races actually are and are not and place them within the wider perspective of natural diversity They explain that the relative isolation of local populations of the newly evolved human species during the last Ice Age when *Homo sapiens* was spreading across the world from an African point of origin has now begun to reverse itself as differentiated human populations come back into contact and interbreed Indeed the authors suggest that all of the variety seen outside of Africa seems to have both accumulated and started reintegrating within only the last 50 000 or 60 000 years the blink of an eye from an evolutionary perspective The overarching message of *Race Debunking a Scientific Myth* is that scientifically speaking there is nothing special about racial variation within the human species These distinctions result from the working of entirely mundane evolutionary processes such as those encountered in other organisms

Antarctic Communities Bruno Battaglia, Jose Valencia, David Walton, 1997-08-28 The study of Antarctic communities can provide a valuable step forward in investigating the control of community development

the utilization of habitats and the interaction among species in both species rich and species poor communities This book contains chapters characterizing the present approaches to both aquatic and terrestrial communities in the Antarctic From biodiversity to trophic flows from ecophysiological strategies to the impacts of environmental change and the effects of human disturbance this volume provides an up to the minute overview of community studies in an area covering ten percent of the Earth s surface **Fishery Bulletin** ,1992 **Stanford Bulletin** ,2004 **Current Mammalogy** H.H.

Genoways,2013-06-29 When I first proposed a series entitled Current Mammalogy to the publishers they were reluctant to undertake such a project because they viewed the field of mammalogy as overly fragmented At first I found this idea to be difficult to accept however upon reflection I came near to agreeing with it Although many of us work on mammals we generally feel more allegiance to our specialties such as systematics genetics cytogenetics ecology behavior pest control paleontology wildlife management primatology and marine mammalogy than we do to the general field of mammalogy However rather than becoming discouraged from pursuing this project I became more certain than ever that a series such as Current Mammalogy was needed We hope to make this series a place where specialists can present their ideas not only to other members of their specialty but to those outside the area as well Hopefully this exchange of ideas will be a mutually beneficial exercise The Editorial Board of Current Mammalogy has decided to keep the range of subjects in each volume as broad as possible rather than concentrating on one or two topics in the hope that this will keep the series as useful as possible to the broadest range of readers **Technologies to Maintain Biological Diversity** ,1986 **University of**

Michigan Official Publication University of Michigan,1977 Each number is the catalogue of a specific school or college of the University **Parasitism** Albert O. Bush,2001-03-22 Explains parasite biology as a branch of ecology essential reading for zoology and ecology students **Plant Reproductive Ecology : Patterns and Strategies** Jon and Lesley Lovett-Doust Professor of Biology the University of Windsor,1988-07-07 This collection of reviews by leading investigators examines plant reproduction and sexuality within a framework of evolutionary ecology providing an up to date account of the field The contributors discuss conceptual issues showing the importance of sex allocation sexual selection and inclusive fitness and the dimensions of paternity and maternity in plants The evolution maintenance and loss of self incompatibility in plants the nature of sex choice in plants and sex dimorphism are all explored in detail Specific forms of biotic interactions shaping the evolution of plant reproductive strategy are discussed and a taxonomically based review of the reproductive ecology of non angiosperm plant groups such as bryophytes ferns and algae is presented Together these studies focus on the complexities of plant life cycles and the distinctive reproductive biologies of these organisms while showing the similarities between nonflowering plants and the more thoroughly documented flowering species **The Lure of Bacterial Genetics** Stanley Maloy,Kelly T. Hughes,Josep Casadesús,2010-11-01 A unique rigorous scientific approach to understanding bacterial genetics Provides a complete overview of the entire field of bacterial genetics helping the reader to understand how the field

has evolved Inspires readers by providing an opportunity to learn from John Roth's achievements and contributions to bacterial genetics Offers valuable lessons in the history and science of bacterial genetics by providing a behind the scenes look at some of the most important triumphs and mishaps that have occurred on the path to discovery Wild American Ginseng James McGraw, 2023-02-01 Wild American ginseng America's most famous medicinal plant is in trouble In plain prose James McGraw explains why as he translates the latest in ecological and conservation science findings on this unassuming understory herb As the world's foremost authority on wild ginseng McGraw is uniquely poised to present this story based on over twenty years of uninterrupted field research McGraw traces the dramatic ecological history of ginseng in North America documenting the ginseng centric view of a world increasingly dominated by both direct and indirect actions of humans Far more than a story of a single plant species ginseng becomes a parable a canary in a coal mine for what is happening to our dwindling wild species across the globe Documenting lingchi death by a thousand cuts in human interactions with wild species McGraw shows us the evidence of our slowly eroding biodiversity and our diminishing global biotreasury Beyond merely documenting our destruction of nature McGraw also offers a pathway to an optimistic future for ginseng and the wild species with whom we share the planet He illuminates how a dramatic expansion of our commitment to sharing the planet with our fellow planetary companions is the key to preservation and now is the time to do so

Adaptation in Metapopulations Michael J. Wade, 2016-05-03 All organisms live in clusters but such fractured local populations or demes nonetheless maintain connectivity with one another by some amount of gene flow between them Most such metapopulations occur naturally like clusters of amphibians in vernal ponds or baboon troops spread across the African veldt Others have been created as human activities fragment natural landscapes as in stands of trees separated by roads As landscape change has accelerated understanding how these metapopulations function and specifically how they adapt has become crucial to ecology and to our very understanding of evolution itself With *Adaptation in Metapopulations* Michael J. Wade explores a key component of this new understanding of evolution interaction Synthesizing decades of work in the lab and in the field in a book both empirically grounded and underpinned by a strong conceptual framework Wade looks at the role of interaction across scales from gene selection to selection at the level of individuals kin and groups In so doing he integrates molecular and organismal biology to reveal the true complexities of evolutionary dynamics from genes to metapopulations *A Community of Scholars* Thomas Vinciguerra, 2020-11-03 The Columbia University Seminars founded in 1945 represent a distinctive experiment in academia Scholars from different disciplines and institutions as well as practitioners and other experts meet once a month through the academic year to study and discuss subjects sometimes beyond their specialties Through collegial discussion participants learn from one another Today over ninety seminars are ongoing some have outlived their founders while others are just beginning *A Community of Scholars* is a seventy fifth anniversary celebration of the founding of The University Seminars It brings together essays by seminar chairs and other

leading participants that exemplify the diversity and vibrancy of these proceedings Their topics are wide ranging the evolution of the labor movement urban life the politics and culture of Brazil the Enlightenment the prospects for world peace but in each a commitment to intellectual provocation and shared learning is on full display An informative introduction explains how The Seminars came into being and why they continue to matter The volume also features biographical sketches of Frank Tannenbaum the Latin America scholar and criminologist who founded The Seminars and his wife the anthropologist Jane Belo a close friend of Margaret Mead Belo and Tannenbaum endowed The Seminars and allowed them to flourish A remarkable testament to an unparalleled intellectual forum A Community of Scholars allows readers to share in the eclectic spirit of The Seminars
