**House of Commons - Welsh Affairs Committee: The Impact of Changes to Housing Benefit in Wales - HC 159** Great Britain: Parliament: House of Commons: Welsh Affairs Committee, 2013-10-17 The costs of housing benefit currently makes up more than a tenth of the UK Government's expenditure on welfare with costs forecast to reach 25 billion by 2014 15 The Government's policy on under occupation came into force in April 2013 and it is estimated that 40 000 tenants in Wales will be affected representing 46% of working age housing benefit claimants living in the social rented sector This is the highest proportion of any region in Great Britain There could therefore be a shortage of one and two bedroom homes in Wales to re house everyone who wants to downsize If local authorities are struggling to find alternative smaller accommodation for Government should undertake a speedy review of this policy It is also increasingly urgent for the Welsh Government to continue with its house building programme with a particular focus on the building of smaller sized properties obviously this is a long term solution that would require additional resources If no social housing is available tenants may need to move to the private rented sector and private rental costs would need to be monitored The costs of moving disabled households who require adaptations are also a concern There may be a case for exempting disabled households from the policy The Government's proposal to pay housing benefit direct to social tenants under Universal Credit may result in some tenants being unable to manage their rent payments The Committee recommends that the Government provide for housing benefit to be paid direct to the landlords in certain circumstances for example after a specified period of non payment

**Feature Selection and Enhanced Krill Herd Algorithm for Text Document Clustering** Laith Mohammad Qasim Abualigah,2018-12-18 This book puts forward a new method for solving the text document TD clustering problem which is established in two main stages i A new feature selection method based on a particle swarm optimization algorithm with a novel weighting scheme is proposed as well as a detailed dimension reduction technique in order to obtain a new subset of more informative features with low dimensional space This new subset is subsequently used to improve the performance of the text clustering TC algorithm and reduce its computation time The k mean clustering algorithm is used to evaluate the effectiveness of the obtained subsets ii Four krill herd algorithms KHAs namely the a basic KHA b modified KHA c hybrid KHA and d multi

objective hybrid KHA are proposed to solve the TC problem each algorithm represents an incremental improvement on its predecessor For the evaluation process seven benchmark text datasets are used with different characterizations and complexities Text document TD clustering is a new trend in text mining in which the TDs are separated into several coherent clusters where all documents in the same cluster are similar The findings presented here confirm that the proposed methods and algorithms delivered the best results in comparison with other similar methods to be found in the literature
