

Petrel Geophysics

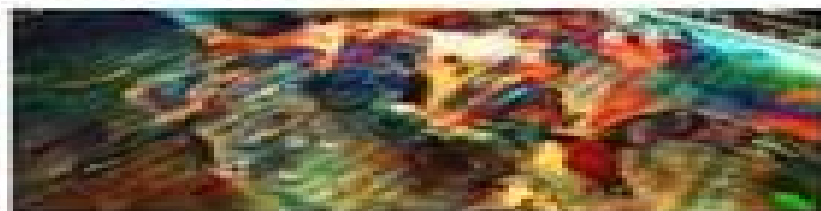

Structural and stratigraphic seismic interpretation

The Petrel platform provides the geoscientist with a single environment for processing 3D, classical 2D, and geo-tack seismic interpretation (structures, faults, and geofacets), as well as quantitative interpretation and 4D seismic workflows.

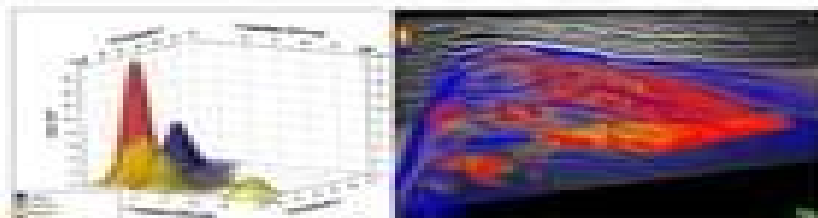

Seismic reconstruction of complex geology using a geomorphological engine, leading to greater structural clarity for more confident decisions.

Advanced edge detection, such as the new consistent curvature and consistent dip seismic attributes in the Petrel platform, provides a clear delineation of complex structures, such as complex faulting or in situ and growth zones. Through interactive geomorphological seismic reconstruction, tectonic and depositional relationships can be investigated. The modeling-while-interpreting capabilities help deliver a consistent validated structural framework of the subsurface that can be used directly in fracture modeling, as well as volumetric workflows.

Generalized Spectral Decomposition result. RGB created using the Mixer tool.

Maximum attribute analysis and volume-based interpretation is the fastest way to interrogate and analyze your data when delineating subtle stratigraphic features. The Petrel platform improves productivity and visualization using the latest GPU technology. Advanced volume attributes, such as Generalized Spectral Decomposition, are generated on-the-fly and blended using the Mixer tool in true 3D for color. Parameters are fine-tuned using interactive and dynamic controls for instant updates. Geological features are isolated and extracted from the seismic, and can be directly compiled into the model and used instantly in property distribution.

Litho classification and prediction from seismic inversion results.

Quantitative interpretation

The Petrel Quantitative Interpretation module provides a comprehensive range of advanced, intuitive, and interactive tools to estimate reservoir properties, all in the same interpretation canvas.

Geoscientists can seamlessly visualize, process, and interpret petrophysical data, perform seismic data conditioning, achieve accurate seismic-well calibration, perform detailed rock physics, RFT, or AFA analysis with 3D cross-plotting capabilities, and perform petrophysical and petrophysical deterministic and stochastic inversion. In Petrel 2015, lithology classification rules (as well as associated probability cubes) can be generated directly from the inversion results.

Complex reservoir imaging

The Petrel platform allows access to petrophysical data and multi-2 interpretation that streamlines the depth imaging workflow between the Omega and Petrel platforms.

In Petrel 2015, the new interactive mesh editing tools provide the ability to interactively modify the triangulated mesh surface, representing the well body, generated from the multi-2 interpretation as from a previous model.

Advanced Mesh Editing tool allowing a modified or reconstructed well mesh bodies to greatly enhance productivity in depth imaging workflows.

Any geophysical work – from classic map based interpretation to advanced quantitative interpretation or 4D workflows – performed using the Petrel platform can be automatically used by other disciplines, such as petroleum systems modeling, geological modeling, and reservoir simulation.
