Science and Survival Barry Commoner, 1966 Plea to every citizen to join in the task of safeguarding the future of mankind
Alone in the Desert David Drew, 1992 **Science of Survival** , 2007 **Life at the Extremes** Frances Ashcroft, 2002-03-18 Explores the limits of human survival and the physiological adaptations that enable us to exist under extreme conditions The author reviews limits to human life underwater at high altitudes at high speeds at micro levels and at freezing and hot temperatures **Наука выживания** Л. Рон Хаббард, 1993 Coma Science Professor Laureys, 2009-10-07 This serial is firmly established as an extensive documentation of the advances in contemporary brain research Each volume presents authoritative reviews and original articles by invited specialists This volume concentrates on coma and consciousness science presenting articles from leading figures in the area on the clinical and ethical implications of work in this field The book provides a thorough review of the various aspects of coma science from a review of the concepts questioning of recent advances case studies through to where research in the field is heading Provides the reader with a unique overview of all aspects of new advances in coma science Broad focus with contributions by the top scientists worldwide in the respective disciplines **Using Science to Improve the BLM Wild Horse and Burro Program** Committee to Review the Bureau of Land Management Wild Horse and Burro Management Program, Board on Agriculture and Natural Resources, Division on Earth and Life Studies, National Research Council, 2013-09-18 Using Science to Improve the BLM Wild Horse and Burro Program A Way Forward reviews the science that underpins the Bureau of Land Management's oversight of free ranging horses and burros on federal public lands in the western United States concluding that constructive changes could be implemented The Wild Horse and Burro Program has not used scientifically rigorous methods to estimate the population sizes of horses and burros to model the effects of management actions on the animals or to assess the availability and use of forage on rangelands Evidence suggests that horse populations are growing by 15 to 20 percent each year a level that is unsustainable for maintaining healthy horse populations as well as healthy ecosystems Promising fertility control methods are available to help limit this population growth however In addition science based methods exist for improving population estimates predicting the effects of management practices in order to maintain genetically diverse healthy populations and estimating the productivity of rangelands Greater transparency in how science based methods are used to inform management decisions may help increase public confidence in the Wild Horse and Burro Program Science In Medicine Ushma S.
