[A History of Science in World Cultures](#) Scott L. Montgomery, Alok Kumar, 2015-06-12 To understand modern science it is essential to recognize that many of

the most fundamental scientific principles are drawn from the knowledge of ancient civilizations Taking a global yet comprehensive approach to this complex topic A History of Science in World Cultures uses a broad range of case studies and examples to demonstrate that the scientific thought and method of the present day is deeply rooted in a pluricultural past Covering ancient Egypt Mesopotamia India Greece China Islam and the New World this volume discusses the scope of scientific and technological achievements in each civilization and how the knowledge it developed came to impact the European Renaissance Themes covered include the influence these scientific cultures had upon one another the power of writing and its technologies visions of mathematical order in the universe and how it can be represented and what elements of the distant scientific past we continue to depend upon today Topics often left unexamined in histories of science are treated in fascinating detail such as the chemistry of mummification and the Great Library in Alexandria in Egypt jewellery and urban planning of the Indus Valley hydraulic engineering and the compass in China the sustainable agriculture and dental surgery of the Mayas and algebra and optics in Islam This book shows that scientific thought has never been confined to any one era culture or geographic region Clearly presented and highly illustrated A History of Science in World Cultures is the perfect text for all students and others interested in the development of science throughout history In Synchrony with the Heavens, Volume 1 Call of the Muezzin David King, 2004-02-01 This is the first investigation of one of the main interests of astronomy in Islamic civilization namely timekeeping by the sun and stars and the regulation of the astronomically defined times of Muslim prayer The study is based on over 500 medieval astronomical manuscripts first identified by the author now preserved in libraries all over the world and originally from the entire Islamic world from the Maghrib to Central Asia and the Yemen The materials presented provide new insights into the early development of the prayer ritual in Islam They also call into question the popular notion that religion could not inspire serious scientific activity Only one of the hundreds of astronomical tables discussed here was known in medieval Europe which is one reason why the entire corpus has remained unknown until the present A second volume also to be published by Brill deals with astronomical instruments for timekeeping and other computing devices **Handbook of Medieval Culture. Volume 1** Albrecht Classen, 2015-08-31 A follow up publication to the Handbook of Medieval Studies this new reference work turns to a different focus medieval culture Medieval research has grown tremendously in depth and breadth over the last decades Particularly our understanding of medieval culture of the basic living conditions and the specific value system prevalent at that time has considerably expanded to a point where we are in danger of no longer seeing the proverbial forest for the trees The present innovative handbook offers compact articles on essential topics ideals specific knowledge and concepts defining the medieval world as comprehensively as possible The topics covered in this new handbook pertain to issues such as love and marriage belief in God hell and the devil education lordship and servitude Christianity versus Judaism and Islam health medicine the rural world the rise of the urban class travel roads and bridges entertainment games and sport activities numbers measuring the

education system the papacy saints the senses death and money **The Genesis of Science** James Hannam,2011-03-22
The Not So Dark Ages What they forgot to teach you in school People in the Middle Ages did not think the world was flat The Inquisition never executed anyone because of their scientific ideologies It was medieval scientific discoveries including various methods that made possible Western civilization s Scientific Revolution As a physicist and historian of science James Hannam debunks myths of the Middle Ages in his brilliant book The Genesis of Science How the Christian Middle Ages Launched the Scientific Revolution Without the medieval scholars there would be no modern science Discover the Dark Ages and their inventions research methods and what conclusions they actually made about the shape of the world

The Zoomorphic Imagination in Chinese Art and Culture Jerome Silbergeld,Eugene Y. Wang,2016-10-31 China has an age old zoomorphic tradition The First Emperor was famously said to have had the heart of a tiger and a wolf The names of foreign tribes were traditionally written with characters that included animal radicals In modern times the communist government frequently referred to Nationalists as running dogs and President Xi Jinping vowing to quell corruption at all levels pledged to capture both the tigers and the flies Splendidly illustrated with works ranging from Bronze Age vessels to twentieth century conceptual pieces this volume is a wide ranging look at zoomorphic and anthropomorphic imagery in Chinese art The contributors leading scholars in Chinese art history and related fields consider depictions of animals not as simple one for one symbolic equivalents they pursue in depth in complexity and in multiple dimensions the ways that Chinese have used animals from earliest times to the present day to represent and rhetorically stage complex ideas about the world around them examining what this means about China past and present In each chapter a specific example or theme based on real or mythic creatures is derived from religious political or other sources providing the detailed and learned examination needed to understand the means by which such imagery was embedded in Chinese cultural life Bronze Age taotie motifs calendrical animals zoomorphic modes in Tantric Buddhist art Song dragons and their painters animal rebuses Heaven sent auspicious horses and foreign sent tribute giraffes the fantastic specimens depicted in the Qing Manual of Sea Oddities the weirdly indeterminate creatures found in the contemporary art of Huang Yong Ping these and other notable examples reveal Chinese attitudes over time toward the animal realm explore Chinese psychology and patterns of imagination and explain some of the critical means and motives of Chinese visual culture The Zoomorphic Imagination in Chinese Art and Culture will find a ready audience among East Asian art and visual culture specialists and those with an interest in literary or visual rhetoric Contributors Sarah Allan Qianshen Bai Susan Bush Daniel Greenberg Carmelita Carma Hinton Judy Chungwa Ho Kristina Kleutghen Kathryn Liscomb Jennifer Purtle Jerome Silbergeld Henrik S rensen and Eugene Y Wang Culture and Conquest in Mongol Eurasia Thomas T. Allsen,2004-03-25 In the thirteenth century the Mongols created a vast transcontinental empire that functioned as a cultural clearing house for the Old World Under Mongol auspices various commodities ideologies and technologies were disseminated across Eurasia The focus of this path breaking study is the

extensive exchanges between Iran and China The Mongol rulers of these two ancient civilizations shared the cultural resources of their realms with one another The result was a lively traffic in specialist personnel and scholarly literature between East and West These exchanges ranged from cartography to printing from agriculture to astronomy The book concludes by asking why the Mongols made such heavy use of sedentary scholars and specialists in the elaboration of their court culture and why they initiated so many exchanges across Eurasia This is a work of great erudition which crosses new scholarly boundaries in its analysis of communication and culture in the Mongol empire **Aladdin's Lamp** John

Freely,2010-03-09 Aladdin s Lamp is the fascinating story of how ancient Greek philosophy and science began in the sixth century B C and during the next millennium spread across the Greco Roman world producing the remarkable discoveries and theories of Thales Pythagoras Hippocrates Plato Aristotle Euclid Archimedes Galen Ptolemy and many others John Freely explains how as the Dark Ages shrouded Europe scholars in medieval Baghdad translated the works of these Greek thinkers into Arabic spreading their ideas throughout the Islamic world from Central Asia to Spain with many Muslim scientists most notably Avicenna Alhazen and Averro s adding their own interpretations to the philosophy and science they had inherited Freely goes on to show how beginning in the twelfth century these texts by Islamic scholars were then translated from Arabic into Latin sparking the emergence of modern science at the dawn of the Renaissance which climaxed in the Scientific

Revolution of the seventeenth century Shariah John L. Esposito,Natana J. DeLong-Bas,2018-03-12 Most Americans and Europeans have by now heard of Shariah In the West politicians media commentators televangelists and others have stoked fears that Muslims intend to impose a repressive rule based on Shariah in America and Europe Shariah has been portrayed as a medieval system that oppresses women stifles human rights and imposes harsh punishments like stoning and amputation In reality however Shariah is a complex concept that has been interpreted in many ways over time and around the world It plays a vital role in the lives of Muslims around the world offering guidance on everything from personal morality to ritual practices family life and finance In this timely addition to Oxford s What Everyone Needs to Know series John Esposito and Natana DeLong Bas offer an accessible and thorough guide to this little understood but often caricatured system The book provides clear and even handed answers to a wide range of questions covering the history development content and practice of Shariah What are its origins What is a Shariah court and how does it work How does a person become a Muslim in the eyes of Islamic law Does Islamic law allow Muslims to marry non Muslims What are blasphemy laws and how are they enforced How does Islamic law govern trade and contracts of sale Do Muslims in the West want Shariah Law Is there a need to protect American and European societies from the imposition of Shariah By answering the questions that so many people have about Shariah and its role in Muslim life this book makes an invaluable contribution to the crucial task of fostering mutual understanding in our globalizing pluralistic societies Conversations on the Beach Gotz Hoeppe,2007-01-01

Already on the margins of an agrarian society the marine fisherfolk of the South Indian state of Kerala are faced with a

severe environmental problem overfishing The actions of trawlers and industrial fishing ships it seems have caused the resources on which they depend to dwindle rapidly Yet what may appear to be a clear cut case of cause effect and responsibility turns out to be a complex issue Local perceptions of the environment are deeply enmeshed with notions of morality the self and people s understanding of their place in society Overfishing is one of several environmental issues that bring into focus parallel knowledges giving rise to contradictory views on what the problems are whether changes are good or bad and how they are to be remedied As the fisherfolk confront the state a discourse develops on what is innate to the environment or natural and on what its malleability entails Based on ethnographic fieldwork among Hindus and Muslims in a coastal village this book explores the fisherfolk s environmental knowledge its transformation in a period of rapid socio economic and political change as well as its role in dealing with the state and the science putatively universal and objective upon which the state s policies are claimed to be based The book emphasises conversation as a cultural process metaphors and figurative speech in the investigation of knowledge as well as the use and limits of memory in conceptualising environmental change

Pull Of History, The: Human Understanding Of Magnetism And Gravity Through The Ages
Yoshitaka Yamamoto, 2017-12-28 This book seeks to understand what bring to pass the birth of modern physics by focusing upon the formation of the concept of force This would be the first book to note the important role magnetism has played in this process Indeed the force between celestial bodies before the introduction of the Isaac Newtonian gravitational force is first introduced by Johannes Kepler by analogy with the magnetic force Moreover this book by concentrating our attention on the magnetism fully describes the developments and the recognition of the force concept during the Middle Ages The detailed description of the Middle Ages and the Renaissance is a strong point of this book By discussing and emphasizing on the role accomplished by the magnetic force this book makes clear the connection between the natural magic and the modern experimental physics This book will open up a new aspect of the birth of modern physics

Road the individuals usually forgotten to history A work of great scholarship Life along the Silk Road continues to be both accessible and entertaining **God's Philosophers** James Hannam,2009-08-07 This is a powerful and a thrilling narrative history revealing the roots of modern science in the medieval world The adjective medieval has become a synonym for brutality and uncivilized behavior Yet without the work of medieval scholars there could have been no Galileo no Newton and no Scientific Revolution In God s Philosophers James Hannam debunks many of the myths about the Middle Ages showing that medieval people did not think the earth is flat nor did Columbus prove that it is a sphere the Inquisition burnt nobody for their science nor was Copernicus afraid of persecution no Pope tried to ban human dissection or the number zero God s Philosophers is a celebration of the forgotten scientific achievements of the Middle Ages advances which were often made thanks to rather than in spite of the influence of Christianity and Islam Decisive progress was also made in technology spectacles and the mechanical clock for instance were both invented in thirteenth century Europe Charting an epic journey through six centuries of history God s Philosophers brings back to light the discoveries of neglected geniuses like John Buridan Nicole Oresme and Thomas Bradwardine as well as putting into context the contributions of more familiar figures like Roger Bacon William of Ockham and Saint Thomas Aquinas **The Beginnings of Western Science** David C.
