

Volcano explosion!

Make an impact using basic kitchen ingredients

Although real volcanoes are the result of complex geological factors, this simple chemistry experiment produces an exciting visual reaction from the formation of carbon dioxide bubbles. Children should seek parental assistance.

You'll need:

- Baking soda
- Dishwashing liquid
- Vinegar
- Red food colouring
- A funnel
- An empty plastic soft drink or mineral water bottle
- A shallow tray or dish

Step 1 Place your bottle in a shallow tray or dish

Note: you can make your container look like a real volcano by using play-dough or papier-mâché to mould a mountain shape around the opening.

Step 2 Fill the bottle with warm water, leaving just a few centimetres of air

Step 3 Add a few drops of red food colouring to the bottle

Volcano facts:

What's happening?

Your flowing red lava is the result of two things. Firstly, a basic chemical reaction occurs between an acid (vinegar) and a base (baking soda, which is also a supermarket-friendly name for a chemical called sodium bicarbonate). Secondly, carbon dioxide gas is produced from the chemical reaction. The bubbling and foaming you see in your volcano experiment is the result of the carbon dioxide gas becoming trapped in the detergent.

Step 4 Add six drops of dishwashing liquid to the bottle

Step 5 Use the funnel to add two tablespoons of baking soda to the bottle

Step 6 Clean the funnel of baking soda and use it to pour 1/4 cup of vinegar into the bottle.

Now stand back, your volcano is about to explode!

Science Project Volcano Construction With Manual Eruption
