

Fresh and Salt Water Systems

Water, water everywhere, but is it fit to drink? To wash our clothes in? To swim in? Think about how much we depend on fresh, clean water.

Most water on Earth is in the oceans. These huge bodies of water influence climate, affecting areas hundreds of kilometres inland. The oceans are also home to thousands of species of plants and animals, including the magnificent humpback whale shown here.

In this unit, you will discover how water — whether fresh, salt, or frozen — is distributed around the world. You will learn the many ways in which water affects our lives and the environment. You will also see how human activities influence not only the quantity of water but also its quality. As people use water — for drinking, agriculture, manufacturing, recreation, and other uses — they alter water systems. Some changes are obvious, such as irrigation and dam construction. These changes can lead to water shortages or to floods. Other changes are less obvious. For example, water may look fine to drink. However, it may contain harmful micro-organisms or toxic substances that have entered the water system from polluting sources.

By studying Earth's fresh and salt water systems, and the organisms that inhabit them, you will gain a greater appreciation for this precious resource. You will see the importance of monitoring and managing our water supplies in a way that ensures sustainability. Sustainability means meeting the needs of the present generation without hindering the ability of future generations to meet their needs, as well.
