Cobern,2012-12-06 Global science education is a reality at the end of the 20th century albeit an uneven reality because of
tremendous technological and economic pressures Unfortunately this reality is rarely examined in the light of what interests
the everyday lives of ordinary people rather than the lives of political and economic elites The purpose of this book is to offer
insightful and thought provoking commentary on both realities The tacit question throughout the book is Whose interests are
being served by current science education practices and policies The various chapters offer critical analysis from the
perspectives of culture economics epistemology equity gender language and religion in an effort to promote a reflective
science education that takes place within rather than taking over the important cultural lives of people The target audience
for the book includes graduate students in education science education and education policy professors policy and

Burguete, 2008 All earnest and honest human quests for knowledge are efforts to understand Nature which includes both human and nonhuman systems the objects of study in science Thus broadly speaking all these quests are in the science domain The methods and tools used may be different for example the literary people use mainly their bodily sensors and their

brain as the information processor while natural scientists may use in addition measuring instruments and computers Yet all these activities could be viewed in a unified perspective OCo they are scientific developments at varying stages of maturity and have a lot to learn from each other That OC everything in Nature is part of scienceOCO was well recognized by Aristotle da Vinci and many others Yet it is only recently with the advent of modern science and experiences gathered in the study of statistical physics complex systems and other disciplines that we know how the human related disciplines can be studied scientifically Science Matters is about all human dependent knowledge wherein humans the material system of Homo sapiens are studied scientifically from the perspective of complex systems It includes all the topics covered in the humanities and social sciences Containing contributions from knowledgeable humanists social scientists and physicists the book is intended for those OCo from artists to scientists OCo who are curious about the world and are interested in understanding it with a unified perspective

Hitler's and Stalin's Misuse of Science S. D. Tucker,2023-12-30 S D Tucker delves into the Nazi and Soviet historical hijacking of science by extreme ideologies revealing the dangerous consequences of pseudoscientific narratives in today s world In today s world science itself which we are constantly being told is a neutral vehicle for wholly objective ideas and theories is increasingly being hijacked and abused by the toxic modern cult of identity politics of both left and right But should we be too surprised by any of this No because this exact same sorry process has happened time and again before under the rule of totalitarian political cults like the Nazis and the Soviets both of which vigorously promoted various pseudoscientific theories of Aryan Science and Marxist Science on the sole grounds that they were ideologically correct as opposed to being factually so Nazi racial pseudoscience and belief in nonsense like the World Ice Theory which claimed that stars did not really exist and were actually just reflections of the sun off giant floating space icebergs were widely encouraged in the Third Reich and used for long term military weather forecasting purposes Likewise the ideas of the renegade biologist Trofim Lysenko who developed a deluded anti capitalist theory of genetics opposed to Darwin s were responsible for widespread famine in the USSR when Stalin allowed him to apply them practically towards the nation s crop harvests Those academics and functionaries who disputed these clearly false pseudoscientific notions often found themselves in deep trouble or ultimately dead In this incisive and challenging study author S D Tucker explores the often weird and fanciful theories that were proposed and took hold under these extreme regimes and in doing so sends a word of warning to the modern world of the internet and social media where similar bizarre ideas are expounded and consumed with frightening gullibility Everywhere from Western universities schools and hospitals to Vladimir Putin s Russia absurd stories of sexist glaciers racist gravity socialist trees and NATO backed mutant extra terrestrial potatoes are being promoted as items of politically mandated scientific fact by compliant collaborators and credulous social media followers Pseudoscientific narratives are even now used to justify the 2022 invasion of Ukraine much as they were once used to justify the Nazi conquest of Europe or the spread of Communist revolution across the globe
