The Criminal Brain Nicole Rafter, 2008-10-01 What is the relationship between criminality and biology Nineteenth century phrenologists insisted that criminality was innate a trait inherent in the offender s brain matter While they were eventually repudiated as pseudo scientists and self deluded charlatans today the pendulum has swung back Both criminologists and biologists have begun to speak of a tantalizing but disturbing possibility that criminality may be inherited as a set of genetic deficits that place one at risk for theft violence and sexual deviance If that is so we may soon confront proposals for genetically modifying at risk fetuses or doctoring up criminals so their brains operate like those of law abiding citizens In The Criminal Brain well known criminologist Nicole Rafter traces the sometimes violent history of these criminological theories and provides an introduction to current biological theories of crime or biocriminology with predictions of how these theories are likely to develop in the future What do these new theories assert Are they as dangerous as their forerunners which the Nazis and other eugenicists used to sterilize incarcerate and even execute thousands of supposed born criminals How can we prepare for a future in which leaders may propose crime control programs based on biology Enhanced with fascinating illustrations and written in lively prose The Criminal Brain examines these issues in light of the history of ideas about the criminal brain By tracing the birth and growth of enduring ideas in criminology as well as by recognizing historical patterns in the interplay of politics and science she offers ways to evaluate new theories of the criminal brain that may radically reshape ideas about the causes of criminal behavior Machine Learning Techniques on Gene

Nathan R. Johnson, 2020-05-26 Probes the development of information management after World War II and its consequences for public memory and human agency We are now living in the richest age of public memory From museums and memorials to the vast digital infrastructure of the internet access to the past is only a click away Even so the methods and technologies created by scientists espionage agencies and information management coders and programmers have drastically delimited

the ways that communities across the globe remember and forget our wealth of retrievable knowledge In *Architects of Memory: Information and Rhetoric in a Networked Archival Age* Nathan R Johnson charts turning points where concepts of memory became durable in new computational technologies and modern memory infrastructures took hold He works through both familiar and esoteric memory technologies from the card catalog to the book cart to Zotocoding and keyword indexing as he delineates histories of librarianship and information science and provides a working vocabulary for understanding rhetoric's role in contemporary memory practices This volume draws upon the twin concepts of memory infrastructure and mnemonic techn to illuminate the seemingly opaque wall of mundane algorithmic techniques that determine what is worth remembering and what should be forgotten Each chapter highlights a conflict in the development of twentieth century librarianship and its rapidly evolving competitor the discipline of information science As these two disciplines progressed they contributed practical techniques and technologies for making sense of explosive scientific advancement in the wake of World War II Taming postwar science became part and parcel of practices and information technologies that undergird uncountable modern communication systems including search engines algorithms and databases for nearly every national clearinghouse of the twenty first century

The Criminal Brain, Second Edition Nicole Rafter, Chad Posick, Michael Rocque, 2016-08-30 A lively up to date overview of the newest research in biosocial criminology What is the relationship between criminality and biology Nineteenth century phrenologists insisted that criminality was innate inherent in the offender's brain matter While they were eventually repudiated as pseudo scientists today the pendulum has swung back Both criminologists and biologists have begun to speak of a tantalizing but disturbing possibility that criminality may be inherited as a set of genetic deficits that place one at risk to commit theft violence or acts of sexual deviance But what do these new theories really assert Are they as dangerous as their forerunners which the Nazis and other eugenicists used to sterilize incarcerate and even execute thousands of supposed born criminals How can we prepare for a future in which leaders may propose crime control programs based on biology In this second edition of *The Criminal Brain* Nicole Rafter Chad Posick and Michael Rocque describe early biological theories of crime and provide a lively up to date overview of the newest research in biosocial criminology New chapters introduce the theories of the latter part of the 20th century apply and critically assess current biosocial and evolutionary theories the developments in neuro imaging and recent progressions in fields such as epigenetics and finally provide a vision for the future of criminology and crime policy from a biosocial perspective The book is a careful critical examination of each research approach and conclusion Both compiling and analyzing the body of scholarship devoted to understanding the criminal brain this volume serves as a condensed accessible and contemporary exploration of biological theories of crime and their everyday relevance

The Criminal Brain Nicole Hahn Rafter, 2008-01-01 The epidemic of mass rape in the former Yugoslavia has illustrated once again and in particularly brutal fashion the inextricable relationship between national politics sexual politics and body politics The nexus of these three

forces is highly charged in any culture at any time in history but especially so among cultures in which rapid even cataclysmic changes in material realities and national self conceptions are eroding or overwhelming previously secure boundaries The postcommunist moment in the so called Second World Central and Eastern Europe and the former Soviet Union has dramatically exposed the opportunities and dangers that arise when the political cultural and economic foundations of a society are de and then re structured Gender roles and relations expressions of sexuality or attempts to recontain them representations of the body especially the female body and the larger cultural meanings it assumes are particularly marked sites to witness the performance of complex national dramas of crisis and change This groundbreaking volume turns its attention to the Second World specifically to such subjects as the birth of the sex media and porn industry in Russia Russian women and alcoholism cinema in post communist Hungary patriotism and gender in Poland sexual dissidence in Eastern Europe and women in the former Yugoslavia go to the Genders website
