Clinical Research Monitoring: A European Approach A A Van Dooren, 2017-09-21 Clinical research monitoring is a

vital aspect of Good Clinical Practice GCP Its principles are straightforward they are aimed at protecting those subjects that participate in the trial and their goal is to provide reliable data that will contribute to the safety and efficacy of the intervention under study i e to support the health of future subjects However the practical implementation of these major goals is complicated Various mishaps have happened in recent history and an extensive set of international rules and regulations have emerged This book gives a thorough survey of the ethical and legal aspects of clinical research and provides a detailed guideline for implementing these aspects into the practice of studying investigational medicinal products in humans in the European context It can be used as a study aid for starting monitors a reference guide for more experienced monitors and anyone else involved in clinical research Related Link s

Process Architecture in Biomanufacturing Facility Design Jeffery Odum, Michael C. Flickinger, 2018-01-26 Essential information for architects designers engineers equipment suppliers and other professionals who are working in or entering the biopharmaceutical manufacturing field Biomanufacturing facilities that are designed and built today are radically different than in the past The vital information and knowledge needed to design and construct these increasingly sophisticated biopharmaceutical manufacturing facilities is difficult to find in published literature and it s rarely taught in architecture or design schools This is the first book for architects and designers that fills this void Process Architecture in Biomanufacturing Facility Design provides information on design principles of biopharmaceutical manufacturing facilities that support emerging innovative processes and technologies use state of the art equipment are energy efficient and sustainable and meet regulatory requirements Relying on their many years of hands on design and operations experience the authors emphasize concepts and practical approaches toward design construction and operation of biomanufacturing facilities including product process facility relationships closed systems and single use equipment aseptic manufacturing considerations design of biocontainment facility and process based laboratory and sustainability considerations as well as an outlook on the facility of the future Provides guidelines for meeting licensing and regulatory requirements for biomanufacturing facilities in the U S A and WHO especially in emerging global markets in India China Latin America and the Asia Pacific regions Focuses on innovative design and equipment to speed construction and time to market increase energy efficiency and reduce footprint construction and operational costs as well as the financial risks associated with construction of a new facility prior to the approval of the manufactured products by regulatory agencies Includes many diagrams that clarify the design approach Process Architecture in Biomanufacturing Facility Design is an ideal text for professionals involved in the design of facilities for manufacturing of biopharmaceuticals and vaccines biotechnology and life science industry including architects and designers of industrial facilities construction equipment vendors and mechanical engineers It is also recommended for university instructors advanced undergraduates and graduate students in architecture industrial engineering mechanical engineering industrial design and industrial interior design *A Lifecycle Approach to Knowledge Excellence in the Biopharmaceutical Industry* Nuala Calnan, Martin J Lipa, Paige E. Kane, Jose C.

Menezes,2017-06-26 This book addresses the rapidly emerging field of Knowledge Management in the pharmaceutical medical devices and medical diagnostics industries In particular it explores the role that Knowledge Management can play in ensuring the delivery of safe and effective products to patients The book also provides good practice examples of how the effective use of an organisation s knowledge assets can provide a path towards business excellence **Risk and Safety**

Management in the Leisure, Events, Tourism and Sports Industries Mark Piekarz,Ian Jenkins,Peter Mills,2015-09-02 The management of risk and safety is not simply a matter of trying to remove risks but is necessary and vital to these industries Sensible risk management is concerned with making the most of the positive opportunities or reducing the negative risks This books shows how the absence of explicit risk practices is not necessarily an absence of risk management and how many existing operational and strategic practices can be understood as part of a process of risk and safety management Its main objective is to develop greater clarity in the communication of risks and the development of safety programmes illustrating how organisations can use a single language of risk relevant for all levels of management and areas of operation **Downstream Industrial Biotechnology** Michael C. Flickinger,2013-07-17 DOWNSTREAM INDUSTRIAL BIOTECHNOLOGY An affordable easily accessible desk reference on biomanufacturing focused on downstream recovery and purification Advances in the fundamental knowledge surrounding biotechnology novel materials and advanced engineering approaches continue to be translated into bioprocesses that bring new products to market at a significantly faster pace than most other industries Industrial scale biotechnology and new manufacturing methods are revolutionizing medicine environmental monitoring and remediation consumer products food production agriculture and forestry and continue to be a major area of research The downstream stage in industrial biotechnology refers to recovery isolation and purification of the microbial products from cell debris processing medium and contaminating biomolecules from the upstream process into a finished product such as biopharmaceuticals and vaccines Downstream process design has the greatest impact on overall biomanufacturing cost because not only does the biochemistry of different products e g peptides proteins hormones antibiotics and complex antigens dictate different methods for the isolation and purification of these products but contaminating byproducts can also reduce overall process yield and may have serious consequences on clinical safety and efficacy Therefore downstream separation scientists and engineers are continually seeking to eliminate or combine unit operations to minimize the number of process steps in order to maximize product recovery at a specified concentration and purity Based on Wiley s Encyclopedia of Industrial Biotechnology Bioprocess Bioseparation and Cell Technology this volume features fifty articles that provide information on down stream recovery of cells and protein capture process development and facility design equipment PAT in downstream processes downstream cGMP operations and regulatory compliance It covers Cell wall disruption and lysis Cell recovery by centrifugation and filtration Large scale protein chromatography Scale down of biopharmaceutical purification operations Lipopolysaccharide removal Porous media in biotechnology Equipment

used in industrial protein purification Affinity chromatography Antibody purification monoclonal and polyclonal Protein aggregation precipitation and crystallization Freeze drying of biopharmaceuticals Biopharmaceutical facility design and validation Pharmaceutical bioburden testing Regulatory requirements Ideal for graduate and advanced undergraduate courses on biomanufacturing biochemical engineering biopharmaceutical facility design biochemistry industrial microbiology gene expression technology and cell culture technology Downstream Industrial Biotechnology is also a highly recommended resource for industry professionals and libraries
