

RON FRANCIS WIRING **AR-67** **Ice Box Cooling System** **With AC Request**

This cooling fan relay handles one large or two small radiator cooling fans (up to 30 amper). This kit is equipped with an electronic sensor that attaches to the engine such as an intake manifold bolt. We recommend the rear intake bolt as a mounting location to reduce air movement near the sensor. However DO NOT cut this sensor wire until the unit is adjusted and working correctly. Some engine applications may require moving the sensor to other locations (NEAR A WATER JACKET) on the engine to achieve the optimal temperature adjustment. The unit is fully adjustable between 140 and 230 degrees.

NOTE: The electronic temperature sensor is located inside of this lug.
 Do not cut it off or modify it for any reason.

Mounting

Choose a location inside the vehicle for the fan module in an accessible location. If you have any ignition components inside the firewall, this module cannot be mounted near them. The fan module has two holes in the base of the module for mounting the unit. **DO NOT DRILL ANY OTHER HOLES OR MODIFY THE MODULE IN ANY WAY. DOING SO WILL DAMAGE THE MODULE & VOID WARRANTY.**

Wiring

The photo below illustrates the connection points on the terminal block of the module. Refer to the photo and text to make the proper connections.

← IGNITION - ORANGE WIRE

← FAN WIRE - DARK BLUE WIRE

← BATTERY - RED WIRE

← 2ND BATTERY (for second independent fan)

← 2ND FAN WIRE (for second independent fan)

← GROUND - BLACK WIRE

← AC REQUEST - PURPLE WIRE

← TERMINAL NOT USED

SENSOR CONNECTIONS, RED TO +, BLACK TO -

NOTE: The pink sensor cable is a jacketed cable containing black and pink wires. After cutting the cable to length "carefully" strip the outer jacket off exposing the two inner wires.
