The procurement strategies for the Olympic Stadium and the Aquatic Centre for the London 2012 Olympic Games Dirk von Plessen,2018-06-26 The International Olympic Committee announced on the 6th July 2005 that the Games of the 30th Olympiad in 2012 will take place in the city of London This study aims to determine whether the procurement strategies chosen by the ODA are the right choice for delivering the two main venues in the Olympic Park in time on budget and to the required quality In order to answer this question the approach of this study is to undertake extensive research in the subject area of construction procurement and to identify best practice in making procurement decisions for a project In particular the procurement strategies chosen by the ODA will be researched and their shortcomings identified Based on this theoretical framework the author will be able to undertake a systematic analysis of the decisions made by the ODA to procure the two most prestigious venues in the Olympic Park As a main part of this analysis the author will conduct semistructured interviews with key people involved in the Olympics and with experts of MSc Management in Construction the industry

Building Procurement Roy Morledge,Adrian J. Smith,Samuel Y. Appiah,2021-04-12 As an industrial process construction is unique The procurement processes used to achieve the successful completion of built assets requires a different approach to that adopted in most other industries due to the design of buildings being bespoke and the sites being geographically varied The procurement process is central to the success of any construction project and many of the problems which impact construction projects can be traced back to the procurement phase so a good understanding of the methods of procurement the development of a procurement strategy and the influence it has on project success is essential for all those working in the industry Much has changed in the global construction industry since publication of the second edition of Building Procurement for example the increase in debt burden of many major economies widespread adoption of Building Information Modelling BIM Technology in the industry and the United Kingdom's exit from the European Union This new edition has been rewritten to take account of these significant developments but at its core it continues to provide a critical examination and review of current procurement practices in the UK continental Europe including EU procurement procedures China Middle East and Sub Saharan Africa and the USA It retains its original strong emphasis on the need for clients to establish achievable objectives which reflect the project business case and focuses on development of suitable strategies and management structures to meet those objectives in the current construction climate Building Procurement will be essential reading for senior undergraduate and postgraduate students of construction management and practitioners working in all areas of construction management

Routledge Handbook of Integrated Project Delivery Derek Walker,Steve Rowlinson,2019-07-26 The concept of integrated project delivery IPD has evolved as a result of the need for highly expert teams of people to collaborate to deliver extremely complex

projects to manage expectations about delivery speed changes in governance standards and to take advantage of and manage expectations raised by rapid advances in technology All this demands effective change management This is the first Handbook to contextualise and thematically explore the concept with an emphasis on rigorous practical and theoretical validation The Handbook is divided into five sections each with a focus on several interconnected themes including An introduction to IPD concepts The foundational elements and characteristics of IPD People culture and collaboration as key ingredients to successful and effective IPD Technology and process aspects of relational contracting forms such as IPD New and relevant perspectives to IPD that have received scant attention to date Aspects and emerging issues that are rarely consciously considered in traditional project delivery due to the commercial imperative that drives firms and client organisations The Handbook offers both discussions of these key themes and also in depth research into construction and other industry project procurement and delivery that spans decades In addition the Handbook presents best and better practice but also includes insights into cutting edge experimental developments in technology and practices where proof of concept is currently being developed into emerging practice Contributing authors in this Handbook collaborate with the co editors to draw together an integrated set of chapters that align to deliver a coherent narrative of the IPD concept It is an invaluable reference for practitioners and academics alike and useful as core course content for numerous degree programs of study and professional development courses

The New Engineering Contract Arthur McInnis, 2001 The introduction of the New Engineering Contract NEC encourages a systematic approach to contracting which is multidisciplinary in nature and fully interlocked in form The NEC is intended by its supporters to be more flexible and easier to use than any current leading traditional standard forms of contract It is believed that these features reduce adversariality and disputes The NEC seeks to achieve this aim primarily through co operative management techniques and incentives built into the NEC s procedures This commentary analyses and evaluates these and related claims of innovation The New Engineering Contract A legal commentary examines the background to the NEC its design objectives structure procedures and likely judicial interpretation to determine whether it improves upon the traditional standard forms of contract Special attention is given in the commentary to the development and the significance of the principles underlying preparation of the NEC as well as the arguments in favour of and against them Throughout the detailed commentary upon the NEC clauses comparisons to the traditional forms are also made to highlight unique features and principles of general application The conclusion reached is that the NEC does make a significant contribution to the development of standard forms of contract addresses many of their shortcomings and offers one of the best models for their future development direction and design The commentary draws upon the body of the project management literature and legal analysis to support its conclusions The New Engineering Contract A legal commentary will be essential reading for lawyers barristers and solicitors as well as engineers and project managers

Construction Stakeholder Management Ezekiel Chinyio, Paul Olomolaiye, 2009-10-22 This book captures

best practice in construction stakeholder management using a range of international case studies. It demonstrates stakeholder mapping, presents the power interest matrix and analyses a model for the timely engagement of stakeholders. The increased use of partnering and other relational forms of contracting have underlined the need for project participants to work together and also to be aware of all those who can affect or be affected by a project and its associated developments. Stakeholder management enables them to see this wider picture and provides guidance for managing the diverse views and interests that can manifest in the course of a project's life. All construction projects have the potential for conflicts of interest that can result in costly and damaging legal proceedings. This new book advocates an alternative to dispute resolution that is proactive, practical and global in its application. Construction Stakeholder Management is therefore an essential text for advanced students, lecturers, researchers and practitioners in the built environment.

Financial Management in Construction Contracting Andrew Ross, Peter Williams, 2013-01-29

Financial Management in Construction Contracting Andrew Ross, Peter Williams. This authoritative text provides a detailed insight into how construction companies manage their finances at both corporate and project level. It guides students and practitioners through the complexities of the financial reporting of construction projects within the constraints of accepted accounting practice. The book is written for non-accountants and from a contractor's perspective and is equally relevant to subcontractors and main contractors. The authors examine the relationship between the external annual accounts and the internal cost value reconciliation process. CVR is covered in depth and the authors consider issues such as interim payments, subcontract accounts, contractual claims, final accounts, cash flow management and the reporting of the physical and financial progress of contracts. A broad perspective of all the financial aspects of contracting is taken along with related legal issues and the authors explain how things operate in the real world. They describe good practice in financial control while at the same time being honest about some of the more questionable practices that can and do happen. The approach taken is unique as the financial management of construction projects is considered from the perspective of the contractor's quantity surveyor. The book deals with the real issues that surveyors have to address when using their judgment to report turnover, profitability, cash flow and work in progress on projects and the financial problems faced by subcontractors are frankly and pragmatically explored. The payment and notice requirements of the Construction Act are explained in detail and relevant provisions of JCT2011, NEC3, ICC, DOM 1 and other standard contracts and subcontracts are also covered. Financial Management in Construction Contracting addresses the wide variety of external factors that influence how construction companies operate, including government policy, banking covenants and the financial aspects of supply chain management. Cost reporting systems are described and real-life examples are used to illustrate cost reports, accrual systems and how computerised systems can be employed to provide the QS with information that can be audited. This is the ideal core text for final year degree and postgraduate students and provides an invaluable reference source for all engaged in the financial management of construction projects.
