Forensic Practitioner's Guide to the Interpretation of Complex DNA Profiles Peter Gill, Øyvind Bleka, Oskar Hansson, Corina Benschop, Hinda Haned, 2020-06-10 Over the past twenty years there's been a gradual shift in the way forensic scientists approach the evaluation of DNA profiling evidence that is taken to court. Many laboratories are now adopting probabilistic genotyping to interpret complex DNA mixtures. However, current practice is very diverse where a whole range of technologies are used to interpret DNA profiles and the software approaches advocated are commonly used throughout the world. Forensic Practitioner's Guide to the Interpretation of Complex DNA Profiles places the main concepts of DNA profiling into context and fills a niche that is unoccupied in current literature. The book begins with an introduction to basic forensic genetics covering a brief historical description of the development and harmonization of STR markers and national DNA databases. The laws of statistics are described along with the likelihood ratio based on Hardy Weinberg equilibrium and alternative models considering sub structuring and relatedness. The historical development of low template mixture analysis theory and practice is also described so the reader has a full understanding of rationale and progression. Evaluation of evidence and statement writing is described in detail along with common pitfalls and their avoidance. The authors have been at the forefront of the revolution having made substantial contributions to theory and practice over the past two decades. All methods described are open source and freely available supported by sets of test data and links to web sites with further information. This book is written primarily for the biologist with little or no statistical training. However, sufficient information will also be provided for the experienced statistician. Consequently, the book appeals to a diverse audience. Covers short tandem repeat STR analysis including database searching and massive parallel sequencing both STRs and SNPs. Encourages dissemination and understanding of probabilistic genotyping by including practical examples of varying complexity. Written by authors intimately involved with software development training at international workshops and reporting cases worldwide using the methods described in this book.

Causing Actions Paul M. Pietroski, 2002 Thoughts often cause deeds. Actions are done for reasons. But do actions and their mental causes also have descriptions that do not involve reasons. Various considerations can make it seem that human mental events must be biochemical events. Paul Pietroski however defends a non Cartesian form of dualism. Actions and their rationalizing causes belong to an autonomous mental domain although this autonomy is compatible with the supervenience of the mental on the non mental. On this view some bodily motions have rationalizing causes distinct from any biochemical causes. Pietroski argues that this is not an objectionable form of overdetermination. Central to his account is his proposed treatment of *ceteris paribus* laws, their role in explanation and how such laws are related to singular causal claims. Pietroski also connects these issues to semantic questions arising from discussions of action reports and belief ascriptions. All philosophers interested in mind or causation will be intrigued by his new theory.
