The Quantum University Perry R. Rettig, 2021-01-10 The Quantum University begins with an analysis of the

current state of higher education organizational structure and leadership based on classical scientific approaches. It then focuses briefly why the classical approaches are inappropriate for human organization such as universities. From this baseline, the book shares descriptions of quantum physics, ecology, chaos theory, and other newer sciences. These sciences provide us important lessons for how we run our universities. These new sciences are a much cleaner fit and metaphor for our institutional structures and leadership models. The Quantum University finishes with a thorough investigation of what a new university structure would look like and the type of leadership it would need. Each chapter is accompanied with a guest essay written by different practitioners from across the nation. In addition, each chapter shares a fictitious story of Leslie She, a new board of trustee member, who struggles with her leadership role. By the end of the book, her insights have provided a new direction not only for herself but also for the university.

Science and Creation John C. Polkinghorne, 2009-07-27 John C. Polkinghorne, internationally renowned priest-scientist, addresses fundamental questions about how scientific and theological worldviews relate to each other in this, the second volume originally published in 1988 of his trilogy, which also included *Science and Providence* and *One World*. Dr. Polkinghorne illustrates how a scientifically minded person approaches the task of theological inquiry, postulating that there exists a close analogy between theory and experiment in science and belief and understanding in theology. He offers a fresh perspective on such questions as: Are we witnessing today a revival of a natural theology? The search for God through the exercise of reason and the study of nature. How do the insights of modern physics into the interlacing of order and disorder relate to the Christian doctrine of Creation? What is the relationship between mind and matter? Polkinghorne states that the remarkable insights that science affords us into the intelligible workings of the world cry out for an explanation more profound than that which it itself can provide. Religion, if it is to take seriously its claim that the world is the creation of God, must be humble enough to learn from science what that world is actually like. The dialogue between them can only be mutually enriching.

Hyper/Text/Theory George P. Landow, 1994-12-05 In his widely acclaimed book *Hypertext*, George P. Landow described a radically new information technology and its relationship to the work of such literary theorists as Jacques Derrida and Roland Barthes. Now Landow has brought together a distinguished group of authorities to explore more fully the implications of hypertextual reading for contemporary literary theory. Among the contributors, Charles Ess uses the work of Jürgen Habermas and the Frankfurt School to examine hypertext's potential for true democratization. Stuart Moulthrop turns to Deleuze and Guattari as a point of departure for a study of the relation of hypertext and political power. Espen Aarseth places hypertext within a framework created by other forms of electronic textuality. David Kolb explores what hypertext implies for philosophy and philosophical discourse. Jane Yellowlees Douglas, Gunnar Liestol, and Mireille Rosello use contemporary theory to come to terms with hypertext narrative. Terrence Harpold investigates the hypertextual fiction of Michael Joyce. Drawing on Derrida, Lacan, and Wittgenstein, Gregory Ulmer offers an example of the new form of writing. Hypertextuality demands
