Professional landscapers and all those involved in creating green spaces have long been in need of a book that is a guide to plant specification but also makes sense of plants and their cultivation. *Plant User Handbook* is for practitioners who are professionally engaged in the use of plants in public commercial and institutional landscapes. Planting schemes are undertaken on the basis of a binding contract generally between the client who owns or leases the landscape and the implementer the landscape contractor with the designer acting both as specifier and contract administrator. Within this contractual relationship planting schemes must be implemented to an agreed timetable. To manage this procedure efficiently landscape designers and managers need quick access to the factual and scientific background for practical planting design and its implementation through specification writing and contracts. The book covers over 20 well defined topics and is written by leading experts in the industry. It is arranged into five sections: Preliminaries to plant use and the landscape; Managing plant growth on landscape sites; Establishment and management of trees; Establishment and management of smaller woody plants; Establishment and management of herbaceous plants. Carefully illustrated with diagrams, black and white photographs and colour plates, this handbook provides a unique resource for professionals wanting to improve their specification skills as well as to explore creative approaches to design and practical implementation.

**Autodesk Arnold Render User Guide for MAYA** Serdar Hakan DÜZGÖREN, Arnold Arnold is an advanced cross platform rendering library or API used by a number of prominent organizations in film television and animation including Sony Pictures Imageworks. It was developed as a photo realistic physically based ray tracing alternative to traditional scanline based rendering software for CG animation. Arnold uses cutting edge algorithms that make the most effective use of your computer's hardware resources: memory, disk space, multiple processor cores and SIMD/SSE units. The Arnold architecture was designed to easily adapt to existing pipelines. It is built on top of a pluggable node system; users can extend and customize the system by writing new shaders, cameras, filters and output driver nodes as well as procedural geometry, custom ray types and user defined geometric data. The primary goal of the Arnold architecture is to provide a complete solution as a primary renderer for animation and visual effects. However, Arnold can also be used as a ray server for traditional scanline renderers, a tool for baking procedural generation of lighting data, lightmaps for videogames, an interactive rendering and relighting tool.
