

Chapter 2 Chemical equilibrium

2.1 Dynamic equilibrium

2.1 KEY QUESTIONS

1.
 - a An **open** system occurs when both matter and energy are exchanged between the system and the surroundings.
 - b Chemical equilibria can occur in **closed** systems.
 - c In some circumstances, a reversible reaction can form a **dynamic** equilibrium.
 - d The extent of reaction for chemical equilibria is **different** for different equilibria.
2.
 - a false
 - b false
 - c true
 - d false

4. closed, decreases, less, reverse, increases, equal
5.
 - a open; both energy and matter (carbon dioxide and water vapour) are exchanged with the surroundings
 - b closed; only energy can be exchanged with the surroundings. While the can is unopened, no matter is exchanged.
 - c open; both energy and matter are exchanged with the surroundings
6. B and F. Equilibrium can only occur in a closed system. At the molecular level, some of the sugar in the saturated sugar solution will continue to dissolve at the same rate as some is precipitated. In the unopened bottle of sparkling mineral water, the dissolved carbon dioxide will be in equilibrium with the gaseous carbon dioxide. In all of the other situations, the reverse reaction is not occurring at the same rate as the forward reaction, because the systems are open.
7. 130 kJ mol^{-1} . The activation energy is the difference between 390 kJ mol^{-1} and 260 kJ mol^{-1} , which is 130 kJ mol^{-1} .
8.
 - a Chemical equilibrium is 'dynamic' because both forward and reverse reactions occur at the same rate. An equilibrium develops between water vapour and water when wet clothes are in a sealed bag, with water evaporating as rapidly as water vapour condenses, so the clothes remain wet.
 - b When the bag is opened, water vapour escapes and the rate of evaporation exceeds the rate of condensation. The system is not in equilibrium and the clothes dry.
9.
 - a 0.07 mol L^{-1}
 - b 0 mol L^{-1}
 - c 0.03 mol L^{-1}
 - d 0.08 mol L^{-1}
 - e 0.04 moles
 - f The horizontal regions of the graph indicate that there is no change in concentration of NO_2 or N_2O_4 . This is when the system is at equilibrium and both the forward and reverse reactions are occurring at the same rate.
 - g 6 seconds
 - h As the reaction proceeds, the intensity of the brown colour will increase as the concentration of NO_2 increases until equilibrium is reached. Once equilibrium is reached, the colour of the reaction mixture will remain constant.

The Pearson Guide to Physical Chemistry for the IIT JEE Singhal, *The Pearson CSAT Manual 2012* Edgar Thorpe, 2012

The Pearson CSAT Manual 2011 Edgar Thorpe, Showick Thorpe, *Nanoscience and Nanotechnology, Proceedings of the INFN-LNF 2018 Conference* Stefano Bellucci, 2020-01-03 The results presented in this volume highlight some of the most recent advances in nanoscience and nanotechnology studies from both the physical and chemical point of view with an eye also to possible engineering applications These studies demonstrate directly how effective and at the same time stimulating is implementing the cross fertilization procedure Indeed multidisciplinary research allows

one to catch more easily the analogies inherent different areas of science as well as to take advantage and optimize different methods and techniques often borrowed from other research areas In the present Special Issue we included six published papers The latter contributions on the one hand are developed at the theory level and on the other hand show experimental results on the realization and experimental characterization of nanostructured systems suitable for yielding progress towards the realization of systems and devices that can ultimately lead to industrial applications The results show that recent scientific research advances in these areas may provide important steps in the direction of fostering innovation and technological development
