**Advances in instructional Psychology** Robert Glaser, 2019-10-25 The contributors to this volume address reasoning and problem solving as fundamental to learning and teaching and to modern literacy The research on expertise and the

development of competence makes it clear that structures of knowledge and cognitive process should be tightly linked throughout education to attain high levels of ability. The longstanding pedagogical assumption that the attainment of useful knowledge proceeds from lower level learning based on the practice of fundamental skills that demand little thought to higher level competence in which problem solving finally plays an increasing role is no longer tenable. It is now clear that thinking is not an outcome of basic learning but is part of the basic acquisition of knowledge and skill. In learning to read for example decoding the printed word and understanding simple texts is an act of problem solving requiring inference and elaboration by the reader. The prevalence of reasoning with information at all levels makes the details of its involvement a fundamental influence on learning and instruction a recurring theme in each of the chapters. A rich variety of topics is addressed including an analysis of the components of teaching competence the evolution of a learner's mathematical understanding the use of causal models for generating scientific explanations the facilitation of meaningful learning through text illustrations the competence of children in argumentative interaction that results in conceptual change.

Reclaiming Authorship Susan S. Williams, 2013-06-15

There was in the nineteenth century a distinction made between writers and authors. Susan S. Williams notes the former defined as those who composed primarily from mere experience or observation rather than from the unique genius or imagination of the latter. If women were more often cast as writers than authors by the literary establishment there also emerged in magazines advice books fictional accounts and letters a specific model of female authorship one that valorized natural feminine traits such as observation and emphasis on detail while also representing the distance between amateur writing and professional authorship. Attending to biographical and cultural contexts and offering fresh readings of literary works *Reclaiming Authorship* focuses on the complex ways writers such as Maria S. Cummins Louisa May Alcott Elizabeth Keckley Mary Abigail Dodge Elizabeth Stuart Phelps and Constance Fenimore Woolson put this model of female authorship into practice. Williams shows how it sometimes intersected with prevailing notions of male authorship and sometimes diverged from them and how it is often precisely those moments of divergence when authorship was reclaimed by women. The current trend to examine women writers rather than authors marks a full rotation of the circle and writers can indeed be the more capacious term embracing producers of everything from letters and diaries to published books. Yet certain nineteenth century women made particular efforts to claim the title author. Williams demonstrates and we miss something of significance by ignoring their efforts.
