Ozone in the Troposphere and Stratosphere Robert D. Hudson, 1994 *Industrial Refrigeration*, 1924 *Chemistry of Ozone in Water and Wastewater Treatment* Clemens von Sonntag, Urs von Gunten, 2012-08-31 Even though ozone has been applied for a long time for disinfection and oxidation in water treatment there is lack of critical information related to transformation of organic compounds This has become more important in recent years because there is considerable concern about the formation of potentially harmful degradation products as well as oxidation products from the reaction with the matrix components In recent years a wealth of information on the products that are formed has accumulated and substantial progress in understanding mechanistic details of ozone reactions in aqueous solution has been made Based on the latter this may allow us to predict the products of as yet not studied systems and assist in evaluating toxic potentials in case certain classes are known to show such effects Keeping this in mind *Chemistry of Ozone in Water and Wastewater Treatment From Basic Principles to Applications* discusses mechanistic details of ozone reactions as much as they are known to date and applies them to the large body of studies on micropollutant degradation such as pharmaceuticals and endocrine disruptors that is already available Extensively quoting the literature and updating the available compilation of ozone rate constants gives the reader a text at hand on which his research can be based Moreover those that are responsible for planning or operation of ozonation steps in drinking water and wastewater treatment plants will find salient information in a compact form that otherwise is quite dispersed A critical compilation of rate constants for the various classes of compounds is given in each chapter including all the recent publications This is a very useful source of information for researchers and practitioners who need kinetic information on emerging contaminants Furthermore each chapter contains a large selection of examples of reaction mechanisms for the transformation of micropollutants such as pharmaceuticals pesticides fuel additives solvents taste and odor compounds cyanotoxins Authors Prof Dr Clemens von Sonntag Max Planck Institut für Bioanorganische Chemie Mülheim an der Ruhr and Instrumentelle Analytische Chemie Universität Duisburg Essen Essen Germany and Prof Dr Urs von Gunten Eawag Swiss Federal Institute of Aquatic Science and Technology Dübendorf and Ecole Polytechnique Fédérale de Lausanne Lausanne Switzerland **The Possible Impact of Fluorocarbons and Halocarbons on Ozone** United States. Schneider, 1989-01-01 These proceedings describe the current state of the art of ozone research A wide range of topics is discussed including emissions transport and transformation of precursors of ozone and of ozone itself the distribution of ozone the deposition of ozone at the earth's surface and its effects on man and the environment Attention is also given to the role of stratospheric ozone and the role of the ultraviolet radiation which is transmitted through the ozone layer Finally it describes in detail present and future policy measures to reduce the
