Applied Rasch Measurement: A Book of Exemplars Sivakumar Alagumalai,David D. Curtis,Njora Hungi,2006-03-30 While the primary purpose of the book is a celebration of John s contributions to the field of measurement a second and related purpose is to provide a useful resource We believe that the combination of the developmental history and theory of the method the examples of its use in practice some possible future directions and software and data files will make this book a valuable resource for teachers and scholars of the Rasch method This book is a tribute to Professor John P Keeves for the advocacy of the Rasch model in Australia Happy 80th birthday John xii There are good introductory texts on Item Response Theory Objective Measurement and the Rasch model However for a beginning researcher keen on utilising the potentials of the Rasch model theoretical discussions of test theory and associated indices do not meet their pragmatic needs Furthermore many researchers in measurement still have little or no knowledge of the features of the Rasch model and its use in a variety of situations and disciplines This book attempts to describe the underlying axioms of test theory and in particular the concepts of objective measurement and the Rasch model and then link theory to practice We have been introduced to the various models of test theory during our graduate days It was time for us to share with those keen in the field of measurement in education psychology and the social sciences the theoretical and practical aspects of objective measurement

Unifying Biology Vassiliki Betty Smocovitis,1996-12 Unifying Biology offers a historical reconstruction of one of the most important yet elusive episodes in the history of modern science the evolutionary synthesis of the 1930s and 1940s For more than seventy years after Darwin proposed his theory of evolution it was hotly debated by biological scientists It was not until the 1930s that opposing theories were finally refuted and a unified Darwinian evolutionary theory came to be widely accepted by biologists Using methods gleaned from a variety of disciplines Vassiliki Betty Smocovitis argues that the evolutionary synthesis was part of the larger process of unifying the biological sciences At the same time that scientists were working toward a synthesis between Darwinian selection theory and modern genetics they were according to the author also working together to establish an autonomous community of evolutionists Smocovitis suggests that the drive to unify the sciences of evolution and biology was part of a global philosophical movement toward unifying knowledge In developing her argument she pays close attention to the problems inherent in writing the history of evolutionary science by offering historiographical reflections on the practice of history and the practice of science Drawing from some of the most exciting recent approaches in science studies and cultural studies she argues that science is a culture complete with language rituals

texts and practices Unifying Biology offers not only its own new synthesis of the history of modern evolution but also a new way of doing history

Nonequilibrium Effects in Ion and Electron Transport Jean W. Gallagher, 2012-12-06 This volume presents the contributions of the participants in the Sixth International Swarm Seminar held August 2 5 1989 at the Webb Institute in Glen Cove New York The Swarm Seminars are traditionally held as relatively small satellite conferences of the International Conference on the Physics of Electronic and Atomic Collisions ICPEAC which occurs every two years The 1989 ICPEAC took place in New York City prior to the Swarm Seminar The focus of the Swarm Seminars has been on basic research relevant to understanding the transport of charged particles mainly electrons and ions in weakly ionized gases This is a field that tends to bridge the gap between studies of fundamental binary atomic and molecular collision processes and studies of electrical breakdown or discharge phenomena in gases Topics included in the 1989 seminar ranged the gamut from direct determinations of charged particle collision cross sections to use of cross sections and swarm parameters to model the behavior of electrical gas discharges Although the range of subjects covered was in many respects similar to that of previous seminars there was an emphasis on certain selected themes that tended to give this seminar a distinctly different flavor There was for example considerable discussion on the meaning of equilibrium and the conditions under which nonequilibrium effects become important in the transport of electrons through a gas
