Physical Science Paper Grade 1 november 2014 Scope:

Pursuing quality education in Physical and Rehabilitation Medicine Francesca Gimigliano, Maria Gabriella Ceravolo, Jorge Lains, 2023-08-15 High quality rehabilitation care represents a constitutive element of health systems worldwide The harmonization of staff education both at the undergraduate and postgraduate level is a key element for ensuring the highest standard of rehabilitation care International bodies like the UEMS Board for Physical and Rehabilitation Medicine PRM or the International Society for PRM have already delivered regulatory documents setting standards in postgraduate PRM education The implementation of such rules is to be validated worldwide with special attention to low and middle income countries This Research Topic aims to stimulate awareness in the scientific community especially for those involved in postgraduate education and policy making decisions It will highlight the need for developing competency based education as a powerful mechanism to align education and training with health system priorities This holds particular value for resource limited countries where the knowledge and skills of rehabilitation doctors need to reflect not only the population's health profile but also the strengths and weaknesses e.g. workforce gaps and maldistributions of the health system This goal can be achieved through sharing experiences between those who have engaged themselves in the process of program development curriculum design and competency based education in rehabilitation Over the last 25 years the number of papers addressing the issue of residency education in PRM has exponentially increased testifying the interest towards the role of rehabilitation and more specifically of the PRM doctors as leaders of the rehabilitation team

The Comprehensive Guide to Science and Faith William A. Dembski, Casey Luskin, Joseph M. data However conflicting interests and tensions among the parties involved are hindering efforts to find shared methods for steering the processing of Big Data in a sound transparent and trustworthy way While consumers call for more transparency food business operators tend to be reluctant to share informational assets This has resulted in a considerable lack of trust in the EU food safety system A recent legislative reform supported by new legal cases aims to restore confidence in the risk analysis system by reshaping the meaning of data ownership in this domain While this regulatory approach is being established breakthrough analytics techniques are encouraging thinking about the next steps in managing food safety data in the age of machine learning The book focuses on two core topics data ownership and data governance by evaluating how the regulatory framework addresses the challenges raised by Big Data and its analysis in an applied significant and overlooked domain To do so it adopts an interdisciplinary approach that considers both the technological advances and the policy tools adopted in the European Union while also assuming an ethical perspective when exploring potential solutions The conclusion puts forward a proposal an ethical blueprint for identifying the principles Security Accountability Fairness Explainability Transparency and Privacy to be observed when processing Big Data for food safety purposes including by means of machine learning Possible implementations are then discussed also in connection with two recent legislative proposals namely the Data Governance Act and the Artificial Intelligence Act

Neuroinflammation and Behaviour Luba Sominsky, Adam K.

Walker, Deborah M. Hodgson, 2015-07-21 The brain and immune system are involved in an intricate network of bidirectional communication This relationship is vital for optimal physiological and psychological development and functioning but can also result in unwanted outcomes In particular this interaction plays an important role in cognition mood and behaviour Neuroinflammation is known to contribute to neurological and affective disorders including impaired learning and memory depressive anxiety and schizoaffective symptoms as well as pain The development of these conditions often occurs on the backdrop of pre existing physical illnesses which give rise to increased activation of the immune system such as cancer obesity infection and autoimmune disorders Similarly psychological states can alter regulation of the immune system This has been most extensively studied in the context of stress and immune function Understanding the underlying mechanisms that lead to the onset of inflammation induced neuropathology and stress induced immune suppression will contribute to the development of novel and effective treatment strategies for both the disease and its neurological side effects In this research topic we explored the relationship between the immune system and the brain throughout life We include both original research and review papers from animal clinical and molecular perspectives

Manufactured Crisis James Simpson, 2024-09-24 Few could have imagined ten years ago where we'd be in America today. We are confronted on all sides by interminable crises that threaten the very fabric of our nation: from a border flooded with millions of migrants from all over the world to a fentanyl crisis killing more American youths every year than the past three wars combined. Radical transgender activism and other cultural insanity has pushed more youths to commit suicide than at any other time in history. It seems as though the world is rapidly coming unglued. But it is actually a diabolical plan that has been operating for over a hundred years and is now showing its face. This book describes this plan in excruciating detail and shows us a path out if we're willing to take it.

Social Justice Loretta Capeheart, Dragan Milovanovic, 2020-05-15 An eye for an eye: the balance of the scales for centuries. These and other traditional concepts exemplified the public's perception of justice. Today, popular culture including television shows like *Law and Order* informs the public's vision. But do age-old symbols, portrayals in the media, and existing systems truly represent justice in all of its nuanced forms, or do we need to think beyond these notions? The second edition of *Social Justice: Theories, Issues, and Movements* responds to the need for a comprehensive introduction to these issues. Theories of social justice are presented in an accessible fashion to encourage engagement of students, activists, and scholars with these important lines of inquiry. Issues are analyzed utilizing various theories for furthering engagement in possibilities. Struggles for justice, from legal cases to on-the-ground movements, are presented for historical context and to inform the way forward.

Inventing the Immigration Problem Katherine Benton-Cohen, 2018-05-07 The Dillingham Commission, created by Congress in 1907 to collect data on a perceived immigration problem, remains the largest U.S. immigration study ever conducted. Katherine Benton-Cohen shows that its Progressive formulation and recommendations endure in almost every component of immigration policy, control, and enforcement a century later.

Subterranean Estuaries Carlos Rocha, Henry Bokuniewicz, Clare Robinson, Isaac R. Santos, Hannelore Waska, 2023-01-19 Over recent decades, it has become widely recognized that water exchange between coastal aquifers and the ocean is an important component of the hydrologic cycle. Twenty years have passed since Willard S. Moore (1999) introduced the term subterranean estuary (STE) to identify those zones within coastal aquifers where fresh groundwater mixes with surface saltwater. Like open water estuaries, STEs regulate the transfer of chemicals to the sea under the seashore by submarine groundwater discharge (SGD). This subterranean reactive node in the land-ocean exchange pathway has a physical, even if elusive, structure created by a combination of temporally and spatially variable mass transfer across the groundwater-ocean interface and dynamic flow processes. Many case studies have shown that SGD is a key material link between coastal

watersheds and the sea and indeed spatially resolved budgets of radioactive tracers in shelf waters suggest it is the dominant bulk water flux to coastal zones globally Clearly STE outflow as SGD is a large source of biogeochemically active solutes to shelf seas meaning that elemental budgets for these waters have to be revised in order to account for the new input But how Recognizing the global prevalence and potential environmental and societal impact of SGD numerous attempts to quantify chemical inputs into the ocean through this pathway have been published over the past 40 years However the role of the STE in modulating chemical fluxes to coastal waters has been generally oversimplified making a comprehensive analysis of cause and effect relationships between SGD inputs and ecosystem dynamics merely indicative Unfortunately we still lack a mechanistic understanding of the processes that control the interaction between allochthonous chemical delivery and autochthonous recycling in the STE that drive compositional variability of SGD flows Like that applied to open water estuaries a general practical and theoretical framework is needed one that captures the structure and biogeochemistry of STEs and allows more accurate understanding of the chemical composition of SGD outflows while simultaneously providing for a typological basis that provides solid support for extrapolation of local SGD chemical flux measurements to regional and from these to global scale A comprehensive and critical review of the current state of the art would reveal that progress requires a improved variable density groundwater flow models that provide more accurate predictions and insights into the flow salt transport and mixing dynamics in STEs b quantitative understanding of the physicochemical and temporal drivers of saline groundwater seepage and composition and c better knowledge of the microbial ecology of STEs and links to marine freshwater and terrestrial drivers of STE dynamics Significant research effort has been devoted to addressing these knowledge gaps It is now time to provide a focused synopsis of these efforts We propose a combination of cutting edge original research systematic practice and policy reviews methods and hypothesis and theory articles tied together by a direction setting perspective analysis to generate a comprehensive and accurate scientific foundation supporting environmental managers scientists and other stakeholders to assess SGD feedbacks on coastal ecosystem functioning and resilience and implement successful coastal management policies
