Alexandra von Meier, 2006-06-12 A clear explanation of the technology for producing and delivering electricity Electric Power Systems explains and illustrates how the electric grid works in a clear straightforward style that makes highly technical material accessible It begins with a thorough discussion of the underlying physical concepts of electricity circuits and complex power that serves as a foundation for more advanced material Readers are then introduced to the main components of electric power systems including generators motors and other appliances and transmission and distribution equipment such as power lines transformers and circuit breakers The author explains how a whole power system is managed and coordinated analyzed mathematically and kept stable and reliable Recognizing the economic and environmental implications of electric energy production and public concern over disruptions of service this book exposes the challenges of producing and delivering electricity to help inform public policy decisions Its discussions of complex concepts such as reactive power balance load flow and stability analysis for example offer deep insight into the complexity of electric grid operation and demonstrate how and why physics constrains economics and politics Although this survival guide includes mathematical equations and formulas it discusses their meaning in plain English and does not assume any prior familiarity with particular notations or technical jargon Additional features include A glossary of symbols units abbreviations and acronyms Illustrations that help readers visualize processes and better understand complex concepts Detailed analysis of a case study including a Web reference to the case enabling readers to test the consequences of manipulating various parameters With its clear discussion of how electric grids work Electric Power Systems is appropriate for a broad readership of professionals undergraduate and graduate students government agency managers environmental advocates and consumers **English Literature A-Level (ZIMSEC) Past Exam Questions and Model Answers** David Chitate, 2024-06-07 Unlock your full potential with our unparalleled Literature in English Past Exam Question Bank for ZIMSEC A Level exams Merging cutting edge technology with expert insights this book offers an unrivaled preparation tool designed to ensure your success Explore this resource to experience the exceptional quality that defines our Past Exam Question Bank series Seize this opportunity to elevate your exam readiness and achieve academic excellence Cell Chemistry and Physiology: Part I Edward Bittar, 1996-01-04 This is the first of a 4 volume module that is an introduction to the study of cell chemistry and physiology It is not intended to be encyclopedic in nature but rather a general survey of the subject with an emphasis on those topics that are central to an understanding of cell biology and those that are certain to become of increasing importance in the teaching of modern medicine We have followed what appeared to as to be the logical divisions of the subject beginning with proteins Allewell and her colleagues stress the point that proteins fold spontaneously to form complex three dimensional structures and that some of them unfold with the help of proteins called chaperones Michaelis Menten kinetics are shown by Nelsestuen

to describe the behaviour of enzymes in the test tube The formalism is particularly useful in the search for agents of therapeutic value as exemplified by methotrexate Uptake by mammalian cells of substrates and their metabolic conversions are discussed by van der Vusse and Reneman However both Welch and Savageau expound the view that the cell is not simply a bagful of enzymes The biologist is urged by Savageau to abandon Michaelis Menten formalism and apply the Power Law The biologist is also told that the approach to arriving at a theory of metabolic control would have to be one of successive approximations requiring the use of the computer Information gained from comparative biochemistry is shown by Storey and Brooks to have shed new light on mechanisms of metabolic rate depression and freeze tolerance and to be applicable to organ transplantation technology We are reminded that enzyme adaptation is partly the result of the presence of a hydrating shell of vicinal water that stabilises conformation of the enzyme Vicinal water according to Drost Hausen and Singleton lies adjacent to most solids and protein interfaces The kinks or breaks observed in the slope of the Arrhenius plot are attributed to structural changes in vicinal water Regulation of cell volume is shown by Hempling to involve regulation of cell water It could be that the osmo receptor or volume detection system is a protein that links the cytoskeleton to specific K and Cl channels Additionally it is interesting that aquaporins which are water channel forming membrane proteins are now known to exist in both renal and extra renal tissues One of the renal porins is affected by vasopressin We then pass on to protein synthesis Rattan and other important topics including protein glycosylation Hounsell methylation Clarke ADP ribosylation Pearson and prenylation Gelb Among the four types of lipids attached to membrane proteins are the prenyl groups Ford and Gross in their chapter on lipobiology drive home the point that there is an accumulation of acyl carnitine and lysophospholipids during myocardial infarction
