Introduction to Qualitative Methods for Differential Equations Ronald E. Mickens, 2025-05-01 Introduction to Qualitative Methods for Differential Equations provides an alternative approach to teaching and understanding differential equations The basic methodology of the book is centred on finding reformulations of differential equations in such a manner that they become partially at least problems in geometry Through this approach the book distils the critical aspects of the qualitative theory of differential equations and illustrates their application to a number of nontrivial problems Features Self contained with suggestions for further reading Concise and approachable exposition with only minimal pre requisites Ideal for self study Appropriate for undergraduate mathematicians engineers and other quantitative science students

Introduction to Soil Physics Daniel Hillel, 2013-10-22 This book is a unified condensed and simplified version of the recently issued twin volumes Fundamentals of Soil Physics and Applications of Soil Physics Nonessential topics and complexities have been deleted and little prior knowledge of the subject is assumed An effort has been made to provide an elementary readable and self sustaining description of the soil s physical properties and of the manner in which these properties govern the processes taking place in the field Consideration is given to the ways in which the soil s processes can be influenced for better or for worse by man Sample problems are provided in an attempt to illustrate how the abstract principles embodied in mathematical equations can be applied in practice The author hope that the present version will be more accessible to students than its precursors and that it might serve to arouse their interest in the vital science of soil physics

Zidek, 2015-06-17 Teaches Students How to Perform Spatio Temporal Analyses within Epidemiological Studies *Spatio Temporal Methods in Environmental Epidemiology* is the first book of its kind to specifically address the interface between environmental epidemiology and spatio temporal modeling In response to the growing need for collaboration between statisticians and **Performative Praxis** Jean Baxen, 2010 It is widely recognized that the South African government's exemplary HIV AIDS education policy is not making the behaviour changing impact that it ought Why is this What is actually happening in the school classroom In this book Jean Baxen makes an important contribution towards understanding the complex interface between the HIV AIDS education curriculum and what and how teachers are teaching in the classroom Bringing Judith Butler's theory of performativity to bear in an analysis of the pedagogic practice of a number of teachers in the Western Cape and Mpumalanga the author shows how teachers' personal conception of their role and identity as educators plays a vitally important role in filtering and shaping the classroom transmission of key information and attitudes Real Solutions to Equations from Geometry Frank Sottile, 2011-08-31 Understanding finding or even deciding on the existence of real solutions to a system of equations is a difficult problem with many applications outside of mathematics While it is hopeless to expect much in general we know a surprising amount about these questions for systems which possess additional structure often coming from geometry This book focuses on equations from toric varieties and Grassmannians Not only is much known about these but such equations are common in applications There are three main themes upper bounds on the number of real solutions lower bounds on the number of real solutions and geometric problems that can have all solutions be real The book begins with an overview giving background on real solutions to univariate polynomials and the geometry of sparse polynomial systems The first half of the

book concludes with fewnomial upper bounds and with lower bounds to sparse polynomial systems The second half of the book begins by sampling some geometric problems for which all solutions can be real before devoting the last five chapters to the Shapiro Conjecture in which the relevant polynomial systems have only real solutions
