OPTIONAL DEFROST DEFERRED (DEFROST DEFERRED)

C	In Demand Defrost (normal cooling defrost)
D	Normal Cooling At Time

DEFROST DEFERRED
The thermostat control has two optional 24 volt AC only inputs. The "W" terminal input is provided for heat pump applications. This signal comes from a heat pump thermostat and tells the heat pump to switch to reversing valve to heat mode. If this "W" signal is also connected to the furnace control, all airflow adjust switches (7 & 8 of 100%) and "On Demand Defrost/Dehumidification" are bypassed in the heat mode only. The airflow will remain at the normal airflow as selected by switches 1 & 2 throughout the heat mode. This allows the user to have a restricted outdoor airflow adjustment for dehumidification or the "On Demand Defrost/Dehumidification" in cooling mode, but not the adverse humidity and heat rate effects of using those adjustments during a heat pump's heat mode. The "W" terminal does not apply to gas operation. The "On Demand Defrost/Dehumidification" (ODD) input allows the user to have automatic dehumidification that is controlled by the user's humidity setting. Dehumidifiers are not compatible with the furnace control. When the humidity exceeds the humidity setting, it sends a 24 volt AC only signal to the "On Demand Defrost/Dehumidification" terminal. Conversely, it will send 0 volts from all when a call for dehumidification is required. When no voltage is present on ODD and the ODD feature is enabled per Table 13, cooling airflow is decreased 1%. This results in higher latent capacity and increases the level of comfort. This feature is only available in the cooling mode.
