Discovered, Not Designed: Building Things in the Age of Complexity Sean McClure, 2024-06-25 To build is to be human. Creating things is part of our nature and our principal mode of survival. The things we have built throughout history have always relied on design to turn discoveries into workable tools. But the underlying premise of design is that we can reason about the pieces and connections that make a thing work. From the stone axe to the rocket engine, design is predicated on our ability to see causal connections between the parts of a system. But what happens when such causality is no longer apparent? When the things we must build to solve our challenges have inner workings that cannot be discerned? The answer lies in nature. Nature fashions truly complex objects that solve categorically hard problems. Complex things produce their most important outputs via emergence, whereby a system's structures and behaviors arise in ways that cannot be designed. This book argues that we are entering an age where humanity must build truly complex things to continue our progress. This means learning to build as nature builds, and as it turns out, forces us to redefine knowledge and skill, and more broadly, our scientific and engineering paradigm.

The 67 revised full papers presented were carefully reviewed and selected from 255 initial submissions: 55 out of 209 in track design and analysis, and 12 out of 46 in track engineering and applications. The papers are organized in topical sections on approximation algorithms, computational geometry, game theory, graph algorithms, stable matchings and auctions, optimization, online algorithms, exponential time algorithms, parameterized algorithms, scheduling, data structures, graphs and games, distributed computing and networking, strings and sorting, as well as local search and set systems.

Cubed Erno Rubik, 2024-05-01 From the inventor of the Rubik's Cube, an idiosyncratic and gripping memoir and an inspiring meditation on curiosity, puzzles, and the value of play. Observer: Erno Rubik was a child when he first became obsessed with puzzles of all kinds. To Rubik, puzzles aren't just games; they're creativity machines bringing out our curiosity, concentration, sense of play, and eagerness to find solutions. He encourages us to find and embrace the puzzles that surround us in our everyday lives. In *Cubed*, the reclusive architect and designer covers more than just his journey to inventing his eponymous cube, one of the bestselling toys of all time and a global symbol of intelligence and ingenuity. He makes a case for always being an amateur, something he considers himself to be. He discusses the inevitability of problems during any act of invention. He reveals what it was like to experience the astonishing worldwide success of an object he made purely for his own play. And he offers what he thinks it means to be a true creator: hint, anyone can do it. Steeped in the wisdom and also the humility of a born inventor, *Cubed* offers a unique look at the imperfect science of creation. Rubik's book is more than just a
