Undargaa, 2016-03-31 The grazing of animals on common land and associated property rights were the original basis of the concept of the tragedy of the commons Drawing on the classic work of Elinor Ostrom and the readings of political ecology this book questions the application of exclusive property rights to mobile pastoralism and rangeland resource governance It argues that this approach inadequately represents property relations in the context of Mongolian pastoralism The author presents an in depth exploration and analysis of mobile pastoral production and resource management in Mongolia The country is widely considered to be a prime example of successful and resilient common pool resource management but now faces a dilemma as policy advocates attempt to adjust historical pastoralism to a modern property regime framework The book strengthens understanding of the complex and multilateral considerations involved in natural resource governance and management in a mobile pastoralist context It considers the implications for common pool resource management and pastoral societies in Africa Russia and China and includes recommendations for formulating national policy An

Econometric and Game Theoretic Model of Common Pool Resource Management Wietze Lise, 2007 This book provides a manual for undertaking research into the role of people in commonly shared resources like forests water bodies fisheries and grazing pastures The method in this book constructs indicators for the level of participation net benefits from participating forest dependence forest quality inequality wealth and social differences It can be concluded that 1 the studied organisations for forest management vary considerably in their effectiveness and 2 voluntary participation is most likely to emerge among the villagers who depend highly on the forest and perceive the quality of the forest as good **Cooperation in Modern**

Cooperative Decision Making in Common Pool Situations Holger I. Meinhardt, 2012-12-06 The monograph gives a theoretical explanation of observed cooperative behavior in common pool situations The incentives for cooperative decision making are investigated by means of a cooperative game theoretical framework In a first step core existence results are worked out Whereas general core existence results provide us with an answer for mutual cooperation nothing can be said how strong these incentives and how stable these cooperative agreements are To clarify these questions the convexity property for common pool TU games is scrutinized in a second step It is proved that the convexity property holds for a large subclass of symmetrical as well as asymmetrical cooperative common pool games Core existence and the convexity results provide us with a theoretical explanation to bridge the gap between the observation in field studies for cooperation and the noncooperative prediction that the common pool resource will be overused and perhaps endangered
