The Fourth Source Robert J. Tuttle, 2012 This book describes how the effects of nature s own nuclear reactors have shaped the Earth the Solar System the Universe and the history of life as we know it It focuses on observed effects that are poorly explained by our standard theories identifies certain errors in those theories and shows how these effects are caused by natural nuclear fission reactors The theory of Plate Tectonics is wrong and it is shown that expansion of the Earth causes continental drift A physically reasonable mechanism is proposed for expansion and observational data are presented to show that this occurs Evolution is explained as punctuated equilibrium with mutations caused by abrupt surges of radiation and related life forms that have been interpreted as separate species are actually the result of radiation injury This view is particularly effective as

applied to humans The ability of the dinosaurs to live so large is explained by use of Earth Expansion and a more massive atmosphere to provide buoyancy and effective transpiration of oxygen These effects also explain how pterodactyls and ancient birds could fly Expansion induced by impacts at the end of the Cretaceous caused the atmosphere to thin and the dinosaurs collapsed Analysis of geological and biological data supports this The astronomical distance scale is shown to be wrong based on the misconception that trigonometric parallax is an absolute measurement It isn't and the method is led astray by the overwhelming number of asteroidal fragments masquerading as stars The measurements of an expanding Universe are shown to be in error and an expanding Universe is not needed by an alternative interpretation of Einstein's equations This interpretation is based on the equal creation of matter and antimatter which is known to occur Spiral galaxies are not vast Island Universes of stars as we have thought but are shown to be the strewn fields of debris from the nuclear fission detonation of distant planets The Universe is not made up of 96% Dark Matter and Dark Energy but is instead very ordinary Abundant evidence and references provide support for all these interpretations This book opens new opportunities for research by correcting several fundamental errors in our concepts of the Earth Life and the Universe *From Garden Art to Landscape Architecture* Joachim Wolschke-Bulmahn, Ronald Clark, 2021-04-26 Originally the area of responsibility for landscape architecture was based on the premise that the planning and creating of open spaces such as parks and gardens was the business of garden artists Today the training of landscape architects and future challenges of the profession include the protection of natural resources and the environment urban planning or tourism to name but a few The international symposium *From Garden Art to Landscape Architecture Traditions Re Evaluations and Future Perspectives* addressed questions which based on the idea of garden art should help to reconstruct its historical development but also discussed the notion and the relevance of art in everyday work The contributions critically reflect on the professional self image of landscape architects at the beginning of the 21st century The symposium in September 2018 was co organized by the City and State Capital of Hannover's Herrenhausen Gardens Division the Deutsche Gesellschaft für Gartenkunst und Landschaftsarchitektur DGGL the Volkswagen Foundation and the Centre of Garden Art and Landscape Architecture
