Brain-powered Science Thomas O'Brien, 2010 How can a long metal needle pass through a balloon without popping it How can water flow at very different rates through two identical funnels How can a stick placed on a table under several sheets of newspaper and extended over the edge of a table snap when quickly struck without lifting or tearing the paper Author Thomas O'Brien takes these and 30 more science inquiry activities to a higher level in this book for educators who love to surprise and challenge their students with unanticipated results Using experiments based on the science of a discrepant event an experiment or demonstration in which the outcome is not what students expect O'Brien shows how learners can be motivated to reconsider their preconceived notions and think more closely about what has actually occurred and the underlying scientific explanations What makes this volume more valuable than a mere activity book is the addition of a science education component to the extensive science content found in each activity Each discrepant event is shown to be analogous to a pedagogical principle Speaking directly to teachers O'Brien writes Your participation as teacher as learner experimenter rather than simply passive reader in these minds on activities will lead you to question and help you to revise your implicit assumptions about the nature of science teaching and learning At the same time you will develop expertise with activities that you can use with your own students The dual purpose activities thus allow you to unlock two doors with one key the doors to your own learning and to your students learning The detailed analogies between the activities and science learning make the book an ideal resource for middle and high school teachers science teacher educators and their preservice students and professional development specialists alike This thorough and thought provoking text includes more than 200 up to date internet resources as well as extensions to each of the physical science biology and chemistry activities bringing the total number of inquiry activities to nearly 120 Most important the author reminds teachers that the study of science is full of surprises and should be both meaningful and fun for students

The Creation-Evolution Debate Edward J. Larson, 2010-01-25 Few issues besides evolution have so strained Americans professed tradition of tolerance Few historians besides Pulitzer Prize winner Edward J. Larson have so perceptively chronicled evolution's divisive presence on the American scene This slim volume reviews the key aspects current and historical of the creation evolution debate in the United States Larson discusses such topics as the transatlantic response to Darwinism the American controversy over teaching evolution in public schools and the religious views of American scientists He recalls the theological qualms about evolution held by some leading scientists of Darwin's time He looks at the 2006 Dover Pennsylvania court decision on teaching Intelligent Design and other cases leading back to the landmark 1925 Scopes

trial Drawing on surveys that Larson conducted he discusses attitudes of American scientists toward the existence of God and the afterlife By looking at the changing motivations and backgrounds of the stakeholders in the creation evolution debate clergy scientists lawmakers educators and others Larson promotes a more nuanced view of the question than most of us have This is no incidental benefit for Larson s readers it is one of the book s driving purposes If we cede the debate to those who would frame it simplistically rather than embrace its complexity warns Larson we will not advance beyond the naive regard of organized religion as the enemy of intellectual freedom or the equally myopic myth of the scientist as courageous loner willing to die for the truth
