Scope Of Economics Paper For November 2014:

EU Competition Law, Data Protection and Online Platforms: Data as Essential Facility Inge Graef, 2016-10-17 All are agreed that the digital economy contributes to a dynamic evolution of markets and competition. Nonetheless, concerns are increasingly raised about the market dominance of a few key players. Because these companies hold the power to drive rivals out of business, regulators have begun to seek scope for competition enforcement in cases where companies claim that withholding data is needed to satisfy customers and cut costs. This book is the first focus on how competition law enforcement tools can be applied to refusals of dominant firms to give access to data on online platforms such as search engines, social networks, and e-commerce platforms, commonly referred to as the gatekeepers of the Internet. The question arises whether the denial of a dominant firm to grant competitors access to its data could constitute a refusal to deal and lead to competition law liability under the so-called essential facilities doctrine, according to which firms need access to shared knowledge in order to be able to compete. A possible duty to share data with rivals also brings to the forefront the interaction of competition law with data protection legislation, considering that the required information may include personal data of individuals. Building on the refusal to deal concept and using a multidisciplinary approach, the analysis covers such issues and topics as the following: data portability; interoperability; data as a competitive advantage or entry barrier in digital markets; market definition and dominance with respect to data; disruptive versus sustaining innovation; role of intellectual property regimes; economic trade-off in essential facilities cases; relationship of competition enforcement with data protection law; and data-related competition concerns in merger cases. The author draws on a wealth of relevant material, including EU and US decision-making, practice, case law, and policy documents, as well as economic and empirical literature on the link between competition and innovation. The book concludes with a proposed framework for the application of the essential facilities doctrine to potential forms of abuse of dominance relating to data. In addition, it makes suggestions as to how data protection interests can be integrated into competition policy. An invaluable contribution to ongoing academic and policy discussions about how data-related competition concerns should be addressed under competition law, the analysis clearly demonstrates how existing competition tools for market definition and assessment of dominance can be applied to online platforms. It will be of immeasurable value to the many jurists, business persons, and academics concerned with this very timely subject.

Emissions Trading Schemes under International Economic Law James Munro, 2018-08-09 The announcement by China that it will implement a national emissions trading scheme confirms the status of this instrument as the pre-eminent policy choice for mitigating climate change. China will join the dozens of existing and emerging schemes around the world, from the EU to California, South Korea to New Zealand, that use carbon units, otherwise known as emissions permits or carbon credits, to trade in greenhouse gas emissions in a multi-billion dollar global carbon market. However, to date, there has been no consensus about this pre-eminent policy instrument being regulated by international economic law through the World Trade

Organization international investment agreements and free trade agreements Munro addresses this issue by evaluating whether carbon units qualify as goods services financial services and investments under international economic law and showing how international economic law applies to emissions trading scheme in diverse and unexpected ways Further by engaging in a comparative assessment of schemes around the world his book illustrates how and why all emissions trading schemes engage in various forms of violations of international economic law which would not in most instances be justified by environmental or other exceptions In doing so he demonstrates how such schemes can be designed or reformed in ways to ensure their future compliance

***The Pluralist Character of the European Economic Constitution* Clemens**

Kaupa, 2016-08-25 This monograph intervenes in the long standing and controversial debate on the socio economic orientation of the European Union Arguing that the European economic constitution is pluralist in the sense that it does not favour any specific socio economic paradigm it shows that European law allows the pursuit of very different regulatory projects by the European and the national legislators This pluralist character of the European economic constitution stands in an uncomfortable relationship with the policies currently pursued by the European Union which are often neoliberal in their orientation The book takes an interdisciplinary approach it analyses the Treaty on the Functioning of the European Union as interpreted and developed in the case law of the Court of Justice its history and its regulatory purpose in the light of conflicting socio economic paradigms By challenging the orthodoxy the book makes a bold proposition that will likely resonate in both European economic law scholarship and European law in general With the ongoing economic crisis triggering a significant interest in economic questions among legal scholars it is particularly timely and topical

Consumer Involvement in Private EU Competition Law Enforcement Maria Ioannidou, 2015-09-03 Despite the growing importance of consumer welfare in EU competition law debates there remains a significant disconnect between rhetoric and reality as consumers and their interests still play only an ancillary role in this area of law Consumer Involvement in Private EU Competition Law Enforcement is the first monograph to exclusively address this highly topical and much debated subject providing a timely and wide ranging examination of the need for more active consumer participation in competition law Written by an expert in the field it sets out a comprehensive framework of policy implications and arguments

for greater involvement positioning the debate in the context of a broader EU law perspective It outlines pragmatic approaches to remedial and procedural measures that would enable consumer empowerment Finally the book identifies key institutional and political obstacles to the adoption of effective measures and suggests alternative routes to enhance the role of consumers in private competition law enforcement The book s innovative approach combining normative analysis and practical solutions make it invaluable for academics policy makers and practitioners in the field **Engaging the**

inherent imbalances is simply a question of implementing methodological changes The Economics of Resource Allocation in Health Care represents the first comprehensive analysis of equity weighting in health care resource allocation that offers a fundamental critique of its basic framework It offers a critique of health economics putting the discourse on economic evaluation into its broader socio political context Such an approach broadens the debate on fairness in health economics and ties it in with deeper rooted problems in moral philosophy Ultimately this interdisciplinary study calls for the adoption of a fundamentally different paradigm to address the distribution of scarce medical resources This book will be of interest to policy makers health care professionals and post graduate students looking to broaden their understanding of the economics of the health care system *The Service Sector and Economic Development in Africa* Evelyn F. Wamboye, Peter

Nyaronga, 2018-09-04 The service sector accounts for a huge proportion of global employment and is the biggest driver of gross domestic product in developing nations Yet there has been little research uncovering its scope potential and implications on sustained and inclusive economic growth This is especially true for Africa which has seen a strong growth trajectory in recent years This book presents a new frontier of research offering insightful perspectives on the 21st century realities of the service sector and its effect on economic development in Africa The analysis presented here will be of relevance to academics and policymakers with an interest in Africa's role in the global economy **State Capitalism** Joshua Kurlantzick, 2016 The end of the Cold War ushered in an age of American triumphalism best characterized by the Washington Consensus the idea that free markets democratic institutions limitations on government involvement in the economy and the rule of law were the foundations of prosperity and stability The last fifteen years starting with the Asian financial crisis have seen the gradual erosion of that consensus Many commentators have pointed to the emergence of a powerful new rival model state capitalism In state capitalist regimes the government typically owns firms in strategic industries Not beholden to private sector shareholders such firms are allowed to operate with razor thin margins if the state deems them strategically important China soon to be the world's largest economy is the best known state capitalist regime but it is hardly the only one In State Capitalism Joshua Kurlantzick ranges across the world China Thailand Brazil Russia South Africa Turkey and more and argues that the increase in state capitalism across the globe has on balance contributed to a decline in democracy He isolates some of the reasons for state capitalism's resurgence the fact that globalization favors economies of scale in the most critical industries and the widespread rejection of the Washington Consensus in the face of the problems that have plagued the world economy in recent years That said a number of democratic nations have embraced state capitalism and in those regimes state backed firms like Brazil's Embraer have enjoyed considerable success Kurlantzick highlights the mixed record and the evolving nature of the model yet he is more concerned about the negative effects of state capitalism When states control firms whether in democratic or authoritarian regimes the government increases its advantage over the rest of society The combination of new technologies the perceived failures of liberal economics and democracy in many developing nations

the rise of modern kinds of authoritarians and the success of some of the best known state capitalists have created an era ripe for state intervention State Capitalism offers the sharpest analysis yet of what state capitalism s emergence means for democratic politics around the world

Cities and Development Sean Fox,Tom Goodfellow,2016-02-11 For the first time in human history more people now live in towns and cities than in rural areas In the wealthier countries of the world the transition from predominantly rural to urban habitation is more or less complete But in many parts of Africa Asia and Latin America urban populations are expanding rapidly Current UN projections indicate that virtually all population growth in the world over the next 30 years will be absorbed by towns and cities in developing countries These simple demographic facts have profound implications for those concerned with understanding and addressing the pressing global development challenges of reducing poverty promoting economic growth improving human security and confronting environmental change This revised and expanded second edition of *Cities and Development* explores the dynamic relationship between urbanism and development from a global perspective The book surveys a wide range of topics including the historical origins of world urbanization the role cities play in the process of economic development the nature of urban poverty and the challenge of promoting sustainable livelihoods the complexities of managing urban land housing infrastructure and urban services and the spectres of endemic crime conflict and violence in urban areas This updated volume also contains two entirely new chapters one that examines the links between urbanisation and environmental change and a second that focuses on urban governance and politics Adopting a multidisciplinary perspective the book critically engages with debates in urban studies geography and international development studies Each chapter includes supplements in the form of case studies chapter summaries questions for discussion and suggested further readings The book is targeted at upper level undergraduate and graduate students interested in geography urban studies and international development studies as well as policy makers urban planners and development practitioners
