Future of STEM education: Multiple perspectives from researchers Subramaniam Ramanathan, Ida Ah Chee Mok, 2023-03-28 *Scientific and Technical Aerospace Reports*, 1976-10 If Einstein Ran the Schools Thomas Armstrong Ph.D., 2019-10-11 Many world class thinkers and creators have been concerned about the state of education in the United States Discover their thoughts on how children really learn and what teachers must do to optimally tap children's latent abilities During the last three decades education reformers have pushed standardized testing and policies like No Child Left Behind and Common Core to improve test scores and proficiency in basic skills However during this period that author Thomas Armstrong calls the miseducation of America a number of troubling trends have surfaced including a decrease in creative thinking scores among children in kindergarten through third grade Rather than focus on what's wrong with the education system that has produced these outcomes Armstrong lays out what creative thinkers know about how children should be educated In an extended thought experiment he asks what would happen if we turned the reins of educational policy over not to the politicians and educational bureaucrats but to eminent thinkers and creators like Albert Einstein Pablo Picasso Martin Luther King Jr Rachel Carson Doris Lessing Jane Goodall and other seminal culture builders What might they say about the best way to educate a child If Einstein Ran the Schools suggests that the answers to this intriguing question should guide future efforts to reform our nation's schools The American Psychiatric Association Practice Guideline for the Prevention and Treatment of Delirium American Psychiatric Association, 2025-09-04 Prevalence rates of delirium range widely depending on patient population and treatment setting Information on rates of delirium in community settings is limited but in emergency and hospital settings one quarter or more of the patients will experience delirium Rates can be even higher in older individuals critical care patients and patients who have had major orthopedic or cardiovascular surgeries Prevention early detection and optimal treatment are critical because delirium is often unrecognized and is associated with increased morbidity and mortality For example postsurgical delirium has been reported to have a 30 day mortality rate of up to 10% versus 1% in postsurgical patients without delirium Additionally delirium exacts

a significant economic toll on individuals their families and society because of longer hospital stays ICU admissions rehospitalizations and lost wages In the United States direct health care costs of hospitalized older adults with delirium are significantly higher than hospitalized patients without delirium even after adjusting for demographic and clinical factors The American Psychiatric Association Practice Guideline for the Prevention and Treatment of Delirium reviews current evidence based nonpharmacological and pharmacological interventions to prevent or treat delirium in adults In addition it includes statements related to assessment and treatment planning which are an integral part of patient centered care The guideline describes approaches to implementing recommendations and suggestions in clinical practice By providing up to date knowledge the guideline aims to help clinicians feel more confident in preventing recognizing and treating delirium thereby improving the care and well being of their patients Evidence tables literature search results clinical questions and more for this guideline can be found in the online appendixes
