The End of Doom Ronald Bailey,2024-08-06 In the past five decades there have been many many forecasts of impending environmental doom They have universally been proven wrong Meanwhile those who have bet on human resourcefulness have almost always been correct In his widely praised book Ecocam Ronald Bailey strongly countered environmentalist alarmism using facts to demonstrate just how wildly overstated many claims of impending ecological doom really were Now twenty years later the Reason Magazine science correspondent is back to assess the future of humanity and the global biosphere Bailey finds contrary to popular belief that many present ecological trends are quite positive Including Falling cancer incidence rates in the United States The likelihood of a declining world population by mid century The abundant return of agricultural land to nature as the world reaches peak farmland A proven link between increases in national wealth and reductions in air and water pollution Global warming is a problem but the cost of clean energy could soon fall below that of fossil fuels In The End of Doom Bailey avoids polemics and offers a balanced fact based and ultimately hopeful perspective on our current environmental situation Now isn t that a breath of fresh air **High**

Stranded Assets Ben Caldecott, 2019-12-16 The topic of stranded assets created by environment related risk factors has risen up the agenda dramatically influencing many pressing topics in relation to global environmental change For example how best to manage the exposure of investments to environment related risks so that financial institutions can avoid stranded assets the financial stability implications of stranded assets and what this means for macroprudential regulation microprudential regulation and financial conduct reducing the negative consequences of stranded assets by finding ways to address unemployment lost profits and reduced tax income internalising the risk of stranded assets in corporate strategy and decision making particularly in carbon intensive sectors susceptible to the effects of societal action on climate change underpinning arguments by civil society campaigns

attempting to secure rapid decarbonisation to reduce the scale of anthropogenic climate change and designing decarbonisation plans developed by governments as well as companies and investors Taken as a whole this book provides some of the latest thinking on how stranded assets are relevant to investor strategy and decision making as well as those seeking to understand and influence financial institutions This book was originally published as a special issue of the Journal of Sustainable Finance and Investment

Sand and Gravel Spits Giovanni Randazzo, Derek W.T. Jackson, J. Andrew G. Cooper, 2015-04-16 This book draws together a series of studies of spit geomorphology and temporal evolution from around the world The volume offers some unique insights into how these landforms are examined scientifically and how we as humans impact them offering a global perspective on spit genesis and evolution Spits are unique natural environments whose evolution is linked to the adjacent coast and near shore morphology sediment supply coastal dynamics and sea level change Over the past century Global Mean Sea Level GMSL has risen by 10 to 20 centimetres and many coastal spits represent the first sentinel against coastal submersion Scientific research indicates that sea levels worldwide have been rising at a rate of 3.5 millimetres per year since the early 1990s roughly twice the average speed of the preceding 80 years This trend linked to global warming will undoubtedly cause major changes in spit morphology Spits are highly mobile coastal landforms that respond rapidly to environmental change They therefore represent a signature of past environmental change and provide a landform indicator of climate change
