Chemical News and Journal of Physical Science ,1879 Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or

English language arts with a focus on grades 4-8. Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district. Comparatively little has been written about the measurement of achievement in the other grades and subjects. This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all. It addresses traditional end of course tests as well as alternative measures such as portfolios, exhibitions, and student learning objectives. In each case, issues related to design and development, psychometric considerations, and validity challenges are covered from both a generic and a content specific perspective. The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment. Edited by leading experts, these books are comprehensive and practical resources on the latest developments in the field. The Dilemma of Being Chosen M.C. van Rensburg, 2016-06-10. THE DILEMMA OF BEING CHOSEN is about the triangular interworking of being chosen, being favoured, and being purposed for a specific task. Being chosen by God for whatever task is in itself a tremendous honour, but with such honour comes the dilemma that the vessel of choice has to face in relation to that specific task. Long after God has made His choice in choosing the vessel, the vessel more often than not struggles with the context of his or her life in relation to his or her purpose. For a follower of Christ, the irony of being chosen is this: we are chosen out of the world.

to live in the world The place from where we are chosen and the one in which we live are two very different places Finding ourselves in between these two worlds is when the tug of war inside of us starts We would be in error if we thought that our lives could remain unaffected by the impact of our being chosen for whatever purpose From the inception of such purpose to its manifestation a person is in need of divine favour to bridge the gap The truth is that although we are called out of the world whilst living in the world the debilitating atmosphere of the world aims to misalign us from our purpose It is such paradox that sets us on a collision course with ourselves which will bring us into contact with the dilemma of being chosen

Learning From Others Diane Shorrocks-Taylor, Edgar W. Jenkins, 2005-12-20 Diane Shorrocks Taylor School of Education University of Leeds UK In September 1998 a conference was held at the University of Leeds entitled International comparisons of pupil performance issues and policy It was arranged by two groups within the School of Education at the University the newly formed Assessment and Evaluation Unit and the Centre for Studies in Science and Mathematics Education The joint interest in international comparisons of performance had itself arisen from earlier involvement in a follow up study of the 1995 TIMSS work in England reported in a later chapter in this book in which the TIMSS assessment outcomes were studied alongside the outcomes from the National Curriculum testing programme in England Some of the results of this investigation had proved both interesting and challenging so the decision was made to promote wider discussion of some key issues by inviting contributors from all over the world to a meeting the major aims of which were to promote an exploration of the theoretical foundations of international comparative studies of student performance the practical problems of carrying out such studies the appropriateness of the assessment models and approaches used in international comparisons the role of international comparative studies in raising standards of student performance and how international studies affect the shaping of national policy on education
